

2013 Oregon State University Research Plan of Work

Status: Accepted
Date Accepted: 06/14/2012

I. Plan Overview

1. Brief Summary about Plan Of Work

The Oregon Agricultural Experiment Station (OAES) has programs that address the five thematic arenas defined by the new National Institute for Food and Agriculture, that is, Sustainable energy, Climate Change, Global Food Security & Hunger, Food Safety, and Obesity. Individual and multi-investigator projects are performed by faculty in all departments of the College of Agricultural Sciences, and several departments in the Colleges of Science, Veterinary Medicine, and Public Health and Human Sciences.

Many of our projects cross disciplinary lines to address critical issues at the local, regional and national level. In the case of potato production in the Pacific Northwest, potato tuberworm (PTW) infestation can result in a 25-100% loss of productivity per field. In the recent past, PTW was threatening some 200,000 potato production acres in Oregon and Washington. Using 2006 Oregon data, this would mean that farmer losses would amount to \$3.45 million in gross sales. Due to our research, losses have been greatly reduced or eliminated, conservatively worth \$3 million or more in Oregon alone. This project effort took the combined efforts of plant pathologists, agronomists, entomologists, and extension personnel.

Research results will be shared through refereed journal articles, abstracts, books and book chapters; theses, local, regional, national and international meetings, symposia and workshops; GIS climate, geophysical and plant maps; and an array of web pages of an array of types. Ten major state output measures were defined along with three outcome measures (Knowledge, Action, and Condition).

All units in the Oregon Agricultural Experiment Station conduct performance evaluation of their faculty members. These reviews are conducted based on workplan objectives established during the previous review and in the faculty member's position description. In addition, all faculty members with OAES FTE greater than .2 fte are required to establish at least one station project, and they are required to submit both a CRIS report and an Oregon State University report. For the latter, researchers submit reports through the College of Agricultural Sciences' online accountability system, Oregon Invests!. Faculty with extension appointments submit reports through the Extension Service's SOARS database. In both systems, faculty are asked to document accomplishments and outcomes. These reports are used in faculty evaluations. The performance evaluations are a good vehicle to assess our progress toward the goals in our plan of work.

Estimated Number of Professional FTEs/SYs total in the State.

Year	Extension		Research	
	1862	1890	1862	1890
2013	3.0	0.0	70.0	0.0
2014	3.0	0.0	70.0	0.0
2015	3.0	0.0	70.0	0.0
2016	0.0	0.0	70.0	0.0

Estimated Number of Professional FTEs/SYs total in the State.

Year	Extension		Research	
	1862	1890	1862	1890
2017	0.0	0.0	0.0	0.0

II. Merit Review Process

1. The Merit Review Process that will be Employed during the 5-Year POW Cycle

- Combined External and Internal University External Non-University Panel
- Expert Peer Review

2. Brief Explanation

All projects conducted by the OAES are subjected to a peer review process. Each department or branch station is responsible for completing a peer review for all OAES projects submitted for support by state and federal funds (guidance for conducting the review is contained in a policy and procedural manual, available to all faculty and unit leaders). A minimum of three external peer reviews must be received. Project members are required to respond to reviewer comments. The Director or his designee oversees the process for rigor, objectivity, and thoroughness. The Director or his designee must approve all proposals that are submitted by faculty through the OAES. Projects are periodically subject to industry and agency reviews as well.

III. Evaluation of Multis & Joint Activities

1. How will the planned programs address the critical issues of strategic importance, including those identified by the stakeholders?

During the reporting period, the Oregon Agricultural Experiment Station (OAES) reassessed all programs used to address its internal strategic plan, which was formulated with input from internal and external stakeholders. Each of the programs in some way supports objectives from one or more of the five strategic challenges identified by the National Institute for Food and Agriculture (NIFA) of the U.S. Department of Agriculture (USDA). The OAES programs were reviewed and edited to now also address the five new themes identified by NIFA, i.e., Bioenergy, Climate Change, Global Food Security/Hunger, Food Safety, and Obesity.

Annual evaluations of outputs and outcomes will provide input into the development of new or revised plans of work that better target state, regional, and USDA priorities and portfolios.

2. How will the planned programs address the needs of under-served and under-represented populations of the State(s)?

A number of our projects directly address the needs of rural, under-served, and under-represented populations in the state and the region. The results of these projects inform our programs, our strategic and implementation plans, and our agency and industry partners.

The important issues and topics of today are typically complex and multi-faceted.

Addressing them often requires intellectual resources from multiple disciplines and multiple perspectives. The College will place high priority on building connections among its component units and with other units within and outside the University where appropriate to advance education or research goals.

Our ecozone-based Branch Stations and county based Extension offices are the front line connection to the myriad sectors in the state. Their visible presence and customer service orientation puts them in direct contact with our stakeholders. They are also able to assess emerging issues and needs as well as new or underserved and under-represented populations. They are often the first to note new stakeholders or emerging groups within the general populations. They are not shy about informing the administrative branch about special needs or under-served populations.

A more formal method of delivering observations and information into the planning process for the Station are the annual development of unit and individual plans of work. Administrative review of these workplans allows more systematic compilation and assessment of these observations.

Partnerships are an effective means to greater "reach" for the College's programs. We will continue to work (and look for opportunities to expand our relationships) with non-governmental organizations, businesses, and local, state, and federal agencies. Joint programming through cooperative agreements with federal agencies can be especially effective.

3. How will the planned programs describe the expected outcomes and impacts?

Faculty are expected to report annually on their accomplishments and programmatic outcomes. Their reports are edited and posted on Oregon Invests!, a searchable, web-based database which is accessible to the public. This online database was designed to be outcome based system, providing information on economic, environmental, and societal benefits. The system also indicated whether impacts are positive or negative and the general magnitude of the impact. To create the records about faculty effort, the faculty with research appointments in the Agricultural Experiment Station must complete a formal questionnaire which is reviewed by an experienced economist. Follow-on interviews are often conducted with the faculty member to elicit additional information to clarify points.

Outcomes can be sorted by outcome type, topic, location, work unit or discipline. Reports are forwarded to the Station's communication unit to be used in the semi-annual Station magazine, "Oregon Agricultural Progress," as the basis for press releases about the work, as the basis for an Oregon State University research magazine ("Terra"), departmental reports, and as input into a Provost's Annual Report. These reports can also be used by the departments as part of the faculty performance review.

In addition to Oregon Invests!, faculty also annually report their accomplishments in CRIS, and NIMSS if appropriate. Further, faculty with Extension appointments also report their accomplishments and impacts to Oregon Extension Service through a separate online system.

We had begun a pilot project late in the past reporting period to analyze the impact of our projects and programs on the state and region (in terms of economic, societal, and behavior change). Eight projects were selected to be included in this pilot study. The pilot study effort is nearing completion and results should soon be available.

As a publicly invested institution, we are expected to measure our productivity and assess its value. We must scrutinize our enrollment trends, research productivity, and the consequences of our outreach education, unit by unit, program by program. We must assure that what we undertake has consequences sufficient to justify the investment and, if not, then be bold enough to prune away that for which need has diminished or productivity has declined, and reinvest where the need or opportunity is greater.

4. How will the planned programs result in improved program effectiveness and/or

The portfolio approach begun in the 2007-2011 plan of work encouraged the development of partnerships and collaboration on integrated questions or similar activities. The College also expects further consolidation of efforts across colleges, departments and branch experiment stations. These multi- and inter-disciplinary activities should produce more cohesive and reportable impacts over the next few years as we retool our projects. Also, the consolidation is modifying the way we develop Station-wide metrics and, hopefully, streamlining the way we ask our faculty to report. The pilot impact analysis project will also help us develop better ways to approach the development of programs and to identify appropriate outcome measures to tackle. The effort to date included 10 projects to develop in depth and results were delivered in 2011.

IV. Stakeholder Input

1. Actions taken to seek stakeholder input that encourages their participation

- Use of media to announce public meetings and listening sessions
- Targeted invitation to traditional stakeholder groups
- Targeted invitation to non-traditional stakeholder groups
- Targeted invitation to traditional stakeholder individuals
- Targeted invitation to non-traditional stakeholder individuals
- Targeted invitation to selected individuals from general public
- Survey of traditional stakeholder groups
- Survey of traditional stakeholder individuals
- Survey of the general public
- Survey specifically with non-traditional groups
- Survey specifically with non-traditional individuals
- Survey of selected individuals from the general public
- Other (cspan)

Brief explanation.

At Oregon, OAES through the Colleges of Agricultural Sciences (CAS), Public Health & Human Sciences (CPHHS) and Veterinary Medicine (CVM) uses several formal and informal avenues to solicit stakeholder input on programs conducted and changes in program direction. Formal bodies convened by the colleges, departments or branch stations meet fairly regularly to aid in the direction and guidance of our programs. These tend to take the form of Advisory Committees or Commodity Groups.

A new citizen Statewide Programs Advocacy Network (SPAN) has been established to inform OAES. This group represents local constituencies and stakeholders, gathers local impact stories for the statewide programs, and relays critical information back to their peers in both locality and communities of interest. This ongoing network permits fluid, continual information flow back and forth.

OAES also utilizes a multisectoral stakeholder workshop every other year to gather input. Invitees range from industry, government agencies, nonprofits, consumer groups, and faculty (research, teaching, and extension). They come from a cross-section of diverse food and natural resources systems across the state. This meeting is used to balance regional perspectives and needs and develop a statewide program. This process also helps our diverse clientele understand the needs of the state in light of their own perspective.

Additionally, several websites and a general email address operated by CAS, the departments and branch stations also provide opportunities to receive comments and questions from the public, and well as post responses and changes in programs in response to stakeholder input.

Informally, the deans and directors of CAS and OAES receive input while attending farm and station field days around the state, visiting county-based Extension offices, and participating in other "road trips" around the state. We also gather input while attending meetings, seminars, conferences, and other events that congregate our stakeholders. Making our administrative heads directly available to our clientele is an important mechanism to stay relevant and informed.

CAS has also hired an External Relations Director, who organizes alumni and stakeholder events, hosts special events at county and State fairs and a variety of conferences, receives and transmits input from stakeholders, and makes sure responses are delivered. CAS has implemented current social media technological methods for gathering input and relaying information such as blogs and MySpace pages.

2(A). A brief statement of the process that will be used by the recipient institution to identify individuals and groups stakeholders and to collect input from them

1. Method to identify individuals and groups

- Use Advisory Committees
- Use Internal Focus Groups
- Use External Focus Groups
- Open Listening Sessions
- Needs Assessments
- Use Surveys
- Other (blogs, fairs, websites,)

Brief explanation.

The Oregon Agricultural Experiment Station uses formal and informal methods to identify individuals and groups of stakeholders. The most common method is to rely upon our unit leaders (departmental, station and extension leaders), their faculty and staff, and our students to inform our planning and implementation processes. We also interact regularly with local, state, and federal governmental entities to stay informed about their critical issues and stakeholders. Booths are reserved at state and county fairs, several conferences or expos each year to meet a wider range of stakeholders - surveys are often used to collect information about topics of interest. Web pages solicit input as well as deliver requested information. The College of Agricultural Sciences implemented blogs, MySpace and video clips on its website to reach younger stakeholders and gather as well as post information in more timely and graphic formats. As the Dean and Director meets stakeholders, travels around the state, and attends various meetings, he posts stakeholder reflections and ideas on his blog, which is also shared in a bimonthly online newsletter.

2(B). A brief statement of the process that will be used by the recipient institution to identify individuals and groups who are stakeholders and to collect input from them

1. Methods for collecting Stakeholder Input

- Meeting with traditional Stakeholder groups
- Survey of traditional Stakeholder groups
- Meeting with traditional Stakeholder individuals
- Survey of traditional Stakeholder individuals
- Meeting with the general public (open meeting advertised to all)
- Survey of the general public
- Meeting specifically with non-traditional groups
- Survey specifically with non-traditional groups
- Meeting specifically with non-traditional individuals
- Survey specifically with non-traditional individuals
- Meeting with invited selected individuals from the general public
- Survey of selected individuals from the general public

Brief explanation.

We use field days, formal meeting events, commodity groups and other association groups, faculty and staff, legislative aides, websites, blogs, email addresses, relayed messages, surveys, and students to help us identify individuals and groups.

3. A statement of how the input will be considered

- In the Budget Process
- To Identify Emerging Issues
- Redirect Extension Programs
- Redirect Research Programs
- In the Staff Hiring Process
- In the Action Plans
- To Set Priorities

Brief explanation.

Determining our strategic direction is an on-going, shared responsibility, especially in a College as diverse as the OSU College of Agricultural Sciences and its partners in OAES. The power of our planning derives from the *process*. As noted above, that process includes our continuing dialog with Oregonians and the inevitable distillation of their needs. It also includes matching of faculty strengths with opportunities for outside funding, consistent with our mission. Much of the critical decision-making is at the unit level. Because responsibility is shared between College administration and the units, our strategic planning documents are best seen as a reference for subsequent and continuing conversations between College administration and the individual units. Such conversations will be a regular part of how we operate. In addition, it is relevant to budget reductions made necessary by declining state revenues starting in 2002 and exacerbated by the nation's deep recession starting in

2008.

At stakeholder workshops CAS administrators pose questions and listen to what attendees have to say, then compile these stakeholders' comments, observations, and suggestions. The summaries are posted on the CAS website and points are incorporated into the CAS Action Plan.

OSU/CAS has and continues to solicit and receive thoughtful critiques and sometimes views that differ from its own. Responses are prepared in a timely fashion and posted either to the particular individual or on webpages or in newsletters maintained by CAS and its units.

In 2009, Oregon State University instructed its colleges to develop plans that would implement structural and programmatic change throughout the university to better position it for a future with a predicted small state-supported "footprint." This mandate included restructuring of units, programs, and curricula. Stakeholders, both inside and outside the College of Agricultural Sciences, contributed ideas and suggestions that were used to shape its plan. Discussions throughout 2010 and 2011 among internal and external stakeholders will help refine the design. While most of our stakeholders have said they understand the need for us to be creative at addressing our budget challenges, they also hope that we will be creative in meeting their local needs as well.

V. Planned Program Table of Content

S. No.	PROGRAM NAME
1	Sustainable Energy
2	Climate Change
3	Global Food Security and Hunger
4	Food Safety
5	Childhood Obesity

V(A). Planned Program (Summary)

Program # 1

1. Name of the Planned Program

Sustainable Energy

2. Brief summary about Planned Program

Worldwide energy demand is expected to rise from 404 quads/yr in 2001 to about 640 in 2025, with nearly 86% to be met by oil and other carbonaceous materials, and generating more than 11 billion tons of CO2. But with nearly two-thirds of the world's proven oil reserves located beneath Saudi Arabia and its neighbors, the U.S. and other nations must rely increasingly on the politically volatile Middle East for oil. Also, as the economies of China, India, and other populous countries grow, competition for oil will increase, potentially accompanied by rising geopolitical tensions. Clearly, clean, safe, and sustainable sources of energy are needed in order to meet large, projected increases in demand, to provide energy and economic security for the U.S. and other nations, and to relieve environmental stresses related to fossil fuel use, including global climate change. The program will improve the biological production of bioproducts, including biofuels, from sunlight and agricultural, cellulosic or microbial feedstocks. In addition to improved and enhanced bioproduct development, the program will increase knowledge and understanding of the biofuels supply chain and the energy-water nexus.

3. Program existence : Intermediate (One to five years)

4. Program duration : Long-Term (More than five years)

5. Expending formula funds or state-matching funds : Yes

6. Expending other than formula funds or state-matching funds : Yes

V(B). Program Knowledge Area(s)

1. Program Knowledge Areas and Percentage

KA Code	Knowledge Area	%1862 Extension	%1890 Extension	%1862 Research	%1890 Research
133	Pollution Prevention and Mitigation			20%	
402	Engineering Systems and Equipment			40%	
511	New and Improved Non-Food Products and Processes			20%	
609	Economic Theory and Methods			20%	
	Total			100%	

V(C). Planned Program (Situation and Scope)

1. Situation and priorities

Worldwide energy demand is expected to continue rising exponentially and generating more than 11 billion tons of CO2. But with nearly two-thirds of the world's proven oil reserves located beneath politically volatile Middle Eastern countries, the U.S. and other nations face an uncertain supply. Also, as the economies of China, India, and other populous countries grow, competition for oil will increase.

The U.S. economy has been built on inexpensive fossil-based energy sources. Diminishing reserves, increasing price, and the environmental impact of using fossil energy, dictate that a petroleum-based economy is unsustainable. A reduction in our reliance on petroleum and a shift to the use of renewable, biobased resources are inevitable. Recent passage of renewable fuels policies has stimulated demand for and rapid increases in production of first-generation bio-based feedstocks, contributing to an economic boom in some sectors, to economic hardships in others (e.g., livestock, vegetable), and to record increases in food prices and related concerns about food security. Important environmental impact (e.g., water use and quality) and carbon footprint questions remain to be answered as well.

Achieving the nation's renewable energy and greenhouse gas goals will require the development of second-generation biorefineries (e.g., cellulosic), new feedstocks (e.g., algae, manure, waste products), small-scale distributed systems, and systems that minimize the unintended consequences. In the future, agriculture can be the base for the manufacture of products such as transportation fuels, energy, plastics, synthetic fibers, lubricants, solvents, and paints. Agriculture also will be integral to the manufacture of pharmaceuticals, cosmetics, building materials, biocatalysts, and other biobased, nonfood products. The growth of biobased industries also will revitalize agricultural communities as transportation logistics and infrastructure may necessitate locating many bio-based industries in rural areas. The creation of value-added products from by-products not only provides economic benefit but could also positively impact the environment. Improved technologies and processes will enhance the industry and the nation's economy while reducing inputs, such as water, and impacts of that industry.

Productivity of this emerging sector will be critical to long-term success. Examining the types and sources of productivity, the principal source of long-run growth and prosperity, strongly complements other research areas such as biotechnology, trade, natural resources, and rural development. Besides developing new and better measures of technical change and productivity growth, we need to understand why the observed growth patterns take place. What are the underlying sources of changes in best-practices technologies and in firm's abilities to achieve them? To understand productivity growth is to understand how innovation occurs.

2. Scope of the Program

- In-State Extension
- In-State Research
- Multistate Research
- Integrated Research and Extension

V(D). Planned Program (Assumptions and Goals)

1. Assumptions made for the Program

The key assumptions of this research area are that

- Productivity growth is a principal source of long-run growth and prosperity in the U.S. economy.
- Understand productivity growth is to understand how innovation occurs
- Industry and university biotechnology research not only is a rapidly growing industry in its own right, but is widely regarded to be the principal engine of innovation in U.S. farming.
 - Clean, safe, and sustainable sources of energy are needed in order to meet large, projected increases in demand, to provide energy and economic security for the U.S. and other nations, and to relieve environmental stresses related to fossil fuel use, including global climate change.
 - Technological solutions are available.
 - Water will continue to be a scarce resource in the West.

2. Ultimate goal(s) of this Program

The goal of this program is develop sustainable, environmentally friendly and economically viable technologies and bio-based products from the utilization of renewable bioresources. Research to support this program goal includes:

- a) the production of bioenergy and biofuels and other bioproducts from sunlight and biological feedstocks, as well as and the development of improved microbial feedstocks; and
- b) the search for the determinants and characteristics of productivity growth and examine these determinants in settings of technological change.

Project Objectives include

1. To identify potential feedstocks and develop processing technologies to extract valuable products from renewable resources, as well as develop and engineer aquatic species for improved lipid production
2. To conduct research in fermentation processes, control systems and biological systems modeling for processing renewable bioresources
3. To develop coproducts to provide full utilization of resources and to add economic diversification
4. To examine secondary land and water use impacts
5. To prepare life cycle analyses on the supply value chain
6. To further develop and apply theoretical and computational tools, both parametric and non-parametric, for evaluating technical change, capacity utilization, and productivity growth
7. To examine the determinants of innovation in agricultural biotechnology, with special attention to coordination between public and private sector and to the mix of public-good and private-good inventions

V(E). Planned Program (Inputs)

1. Estimated Number of professional FTE/SYs to be budgeted for this Program

Year	Extension		Research	
	1862	1890	1862	1890
2013	0.0	0.0	3.0	0.0
2014	0.0	0.0	3.0	0.0
2015	0.0	0.0	3.0	0.0
2016	0.0	0.0	3.0	0.0
2017	0.0	0.0	0.0	0.0

V(F). Planned Program (Activity)

1. Activity for the Program

In summary:

- Conduct Research Experiments
- Develop models and simulation tools
- Develop new culture strains and metabolic engineering tools
- Develop Products, Resources.
- Conduct surveys

- Conduct data analyses
- Conduct workshops
- Provide Training.
- Assessments.
- Partnering.

2. Type(s) of methods to be used to reach direct and indirect contacts

Extension

Direct Methods	Indirect Methods
<ul style="list-style-type: none"> ● Education Class ● Workshop ● Group Discussion ● One-on-One Intervention ● Demonstrations ● Other 1 (journal publication) ● Other 2 (seminars) 	<ul style="list-style-type: none"> ● Newsletters ● Web sites other than eXtension ● Other 1 (station mazazine) ● Other 2 (press releases)

3. Description of targeted audience

The target audiences for this research are :

- public sector
- private sector
- economists
- policy makers
- agricultural biotechnology firms
- farmers
- bioenergy and biofuel producers
- industrial manufacturers of hydrogen and fuel cells

V(G). Planned Program (Outputs)

NIFA no longer requires you to report target numbers for standard output measures in the Plan of Work. However, all institutions will report actual numbers for standard output measures in the Annual Report of Accomplishments and Results. The standard outputs for which you must continue to collect data are:

- Number of contacts
 - Direct Adult Contacts
 - Indirect Adult Contacts
 - Direct Youth Contacts
 - Indirect Youth Contact
- Number of patents submitted
- Number of peer reviewed publications

Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(H). State Defined Outputs

1. Output Measure

- OTHER SCHOLARLY EXCELLENCE: participation on professional boards and panels, as well as science panels, awards, etc.
 - IMPROVED BIOPRODUCT PRODUCTION SYSTEMS . . .
Indicators: 1-Improved technologies and production systems for biofuel and bioenergy (solar energy capture, fermentation, sensors); 2-Improved feedstocks (microbial, algal, agricultural byproducts, invasive species, cellulosic)
 - TECHNOLOGY, MODELS AND ANALYSES THAT INFORM DECISION-MAKERS, INDUSTRY, AND PEERS REGARDING AGRICULTURAL PRODUCTION:
Indicators: 1- theoretical and computation tools (both parametric and non-parametric); 2-determinants of innovation in agricultural biotechnology
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(I). State Defined Outcome

O. No	Outcome Name
1	K1...Improved knowledge about composition and conversion of feedstocks for biofuels, bioenergy, and co-products a) enhance use of existing varieties of algae, other micro-organisms, cellulose, agricultural residues, and invasive species for bio-energy and coproducts b) new feedstock sources, extraction technologies, and co-products c) more acreages and tonnage of feedstocks used d) improved water use and quality
2	K2 ... Improved engineering applications to advance production systems for bioenergy a) optimize photobiological processes to yield higher energy efficiencies. b) demonstrate that waste biomass, such animal wastes and organic component of urban wastewater, used as feedstock can yield bioenergy and reduce waste and pollution sources.
3	K3 ... Models developed to look at biofuel and bioenergy productivity, technological processes, sustainability, and supply chain a) decision tools, economic and life cycle analyses, productivity analyses b) new technologies c) feedstock logistics d) resource inputs, outputs and quality e) land use change f) biodiversity
4	A1...Enhanced or improved bioeconomy a) number of new jobs b) increased revenue c) gallons of biofuels produced or consumed, gallons of fossil fuel displaced
5	A2...Implement sustainable biofuel supply chain a) acres or tons of feedstocks produced, numbers of farms involved in feedstock production b) number of technologies developed c) distributed conversion and processing

Outcome # 1

1. Outcome Target

K1...Improved knowledge about composition and conversion of feedstocks for biofuels, bioenergy, and co-products

- a) enhance use of existing varieties of algae, other micro-organisms, cellulosics, agricultural residues, and invasive species for bio-energy and coproducts
- b) new feedstock sources, extraction technologies, and co-products
- c) more acreages and tonnage of feedstocks used
- d) improved water use and quality

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 133 - Pollution Prevention and Mitigation
- 402 - Engineering Systems and Equipment
- 511 - New and Improved Non-Food Products and Processes

4. Associated Institute Type(s)

- 1862 Research

Outcome # 2

1. Outcome Target

K2 ... Improved engineering applications to advance production systems for bioenergy

- a) optimize photobiological processes to yield higher energy efficiencies.
- b) demonstrate that waste biomass, such animal wastes and organic component of urban wastewater, used as feedstock can yield bioenergy and reduce waste and pollution sources.

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 133 - Pollution Prevention and Mitigation
- 402 - Engineering Systems and Equipment
- 511 - New and Improved Non-Food Products and Processes

4. Associated Institute Type(s)

- 1862 Research

Outcome # 3

1. Outcome Target

K3 ... Models developed to look at biofuel and bioenergy productivity, technological processes, sustainability, and supply chain

- a) decision tools, economic and life cycle analyses, productivity analyses
- b) new technologies
- c) feedstock logistics
- d) resource inputs, outputs and quality
- e) land use change
- f) biodiversity

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 133 - Pollution Prevention and Mitigation
- 402 - Engineering Systems and Equipment
- 511 - New and Improved Non-Food Products and Processes
- 609 - Economic Theory and Methods

4. Associated Institute Type(s)

- 1862 Research

Outcome # 4

1. Outcome Target

A1...Enhanced or improved bioeconomy

- a) number of new jobs
- b) increased revenue
- c) gallons of biofuels produced or consumed, gallons of fossil fuel displaced

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 402 - Engineering Systems and Equipment
- 511 - New and Improved Non-Food Products and Processes

4. Associated Institute Type(s)

- 1862 Research

Outcome # 5

1. Outcome Target

A2...Implement sustainable biofuel supply chain

- a) acres or tons of feedstocks produced, numbers of farms involved in feedstock production
- b) number of technologies developed
- c) distributed conversion and processing

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 402 - Engineering Systems and Equipment
- 511 - New and Improved Non-Food Products and Processes
- 609 - Economic Theory and Methods

4. Associated Institute Type(s)

- 1862 Research

V(J). Planned Program (External Factors)

1. External Factors which may affect Outcomes

- Natural Disasters (drought, weather extremes, etc.)
- Economy
- Appropriations changes
- Public Policy changes
- Government Regulations
- Competing Public priorities
- Competing Programmatic Challenges
- Populations changes (immigration, new cultural groupings, etc.)

Description

World energy use increases faster than production can occur, which may spur technological development. However, changes in appropriations, economy, and public priorities may reduce research funding availability.

V(K). Planned Program - Planned Evaluation Studies

Description of Planned Evaluation Studies

During, Before-After evaluation studies and Life Cycle Analyses will be used to test efficiency of processes and improvements in feedstocks, energy production and water usage. Data collection

methodologies include sampling, observation, and on-site surveys.

V(A). Planned Program (Summary)

Program # 2

1. Name of the Planned Program

Climate Change

2. Brief summary about Planned Program

Anticipated climate changes over the next number of decades will change agricultural production and locations as well as natural resources, particularly water resources. Not only will the land and sea increasingly be expected to provide food, fiber, and fuel in sustainable production systems, but also "ecosystem services" to maintain the health of the planet. The goal of this program is to advance fundamental knowledge about growing systems, the environment and natural resources, and to foster economic growth and sustainability in a manner that is protective of human and environmental health. Maintaining and restoring ecosystem function and processes are key to sustainable food production and use of natural resources. How these resources are managed depends, in part, on improved understanding of the role humans play in modifying ecosystem structure and function. We assume that a multidisciplinary effort will be needed to develop knowledge of complex ecosystem relationships and restoration technologies that are beyond the scope of a single researcher. Diverse scientific expertise that ranges from ecological modeling to habitat, population and community ecology is needed to support ecosystem research. The data and information generated as part of this Program will contribute to ecosystem restoration policy decisions and to the continued development of the theoretical understanding of processes affecting aquatic and terrestrial organisms and ecosystem function. Improving the use and sustainability of terrestrial and marine resources in Oregon and the Pacific Northwest will require us to anticipate the future, balance risks with opportunities, and seamlessly integrating research, outreach, and teaching responsibilities.

3. Program existence : Intermediate (One to five years)

4. Program duration : Long-Term (More than five years)

5. Expending formula funds or state-matching funds : Yes

6. Expending other than formula funds or state-matching funds : Yes

V(B). Program Knowledge Area(s)

1. Program Knowledge Areas and Percentage

KA Code	Knowledge Area	%1862 Extension	%1890 Extension	%1862 Research	%1890 Research
101	Appraisal of Soil Resources	5%		5%

V(C). Planned Program (Situation and Scope)

1. Situation and priorities

As the world's human population grows, land and water resources increasingly will be expected to provide not only food, fiber and fuels in sustainable production systems, but also "ecosystem services" to maintain the health of the planet. The goal of this program is to advance fundamental knowledge about the environment and natural resources, particularly how to address the effects of climate variability and change. This knowledge will help foster and maintain economic growth and sustainability in the face of climate change and in a manner that is protective of human and environmental health. Maintaining and

restoring ecosystem function and processes are key to sustainable food production and use of natural resources. How these resources are managed depends, in part, on improved understanding of the role humans play in modifying ecosystem structure and function. We assume that a multidisciplinary effort will be needed to develop knowledge of complex ecosystem relationships and restoration technologies that are beyond the scope of a single researcher.

Diverse scientific expertise that ranges from ecological modeling to habitat, population and community ecology is needed to support ecosystem research. The data and information generated as part of this Program will contribute to ecosystem restoration policy decisions and to the continued development of the theoretical understanding of processes affecting aquatic and terrestrial organisms and ecosystem function. Improving the use and sustainability of terrestrial and marine resources in Oregon and the Pacific Northwest will require us to anticipate the future, balance risks with opportunities, and seamlessly integrating research, outreach, and teaching responsibilities.

Economic issues underlie many of the political debates over land and water use in Oregon and the West. Some of the most pressing policy issues include how land and water are and will be managed in the coming decades and questions involving land use in the rural-urban interface. Further, we need to make significant contributions toward providing a stable, sustainable, and healthy supply of food, fuel, and fiber for the nation while strengthening Oregon's rural communities. Research for all ecosystems will focus on three principal themes: 1) increasing efficiency and sustainability of resource based enterprises, (2) designing multiple use management strategies that ensure and sustain productivity, biodiversity, and stability of watersheds and ecosystems, and (3) expanding humankind's understanding and stewardship of the region's ecology. Supportive strategies are to create basic knowledge and to inform decisions on biological control of pathogens, pests, and weeds (a feasible component of integrated pest management programs), on the best use of Oregon's soil resources, and to broadly study the involvement of microorganisms in the health of the world and its plant, animal and human inhabitants.

Water scarcity, or competing uses for finite water resources, will only increase in the future. Given the uncertainty associated with changing availability of water resources (IPCC 2007), critical questions remain regarding the effects of water scarcity and hazards on people and the environment of Oregon and our ability to limit and mitigate those effects. Our efforts will identify the major resource constraint issues and to provide water resource management decision-makers with the best scientific information available for addressing the allocation, management and engineering of soil and water resources. The integrated program encompasses natural ecosystems at the watershed or stream scale, as well as quantifying anthropogenic impacts related to site contamination or water use for irrigation and their effects on the natural ecosystem. Water related research will focus on two activity areas: 1) Improved agricultural water management and 2) Watershed enhancement and sustainability.

2. Scope of the Program

- In-State Extension
- In-State Research
- Multistate Research
- Multistate Extension
- Integrated Research and Extension
- Multistate Integrated Research and Extension

V(D). Planned Program (Assumptions and Goals)

1. Assumptions made for the Program

- policymakers recognize the impact that economic behavior has in social decisions regarding management of water and land resources and these policymakers also value economic analysis when addressing issues related to management of land and water
 - Growers, crop consultants, agricultural researcher and extension faculty, and ecologists and managers of natural ecosystems desire improved knowledge on plant diseases, invasive weeds, and storage decay
 - faculty are in on-going contact with professional peers across the OSU campus, around the state of Oregon, the country, and world. They work in cooperation with peers in state, regional, and federal agencies. They work with county extension and branch research station faculty. They are members of successful national competitive grants. Through this array of contacts they have a keen awareness of local, state, regional, national, and international research needs in the soil sciences
 - the Oregon Agricultural Experiment Station and its Extension colleagues continue to advance fundamental knowledge about the environment and natural resources, and foster economic growth and sustainability in a manner that is protective of human and environmental health.
 - maintaining and restoring ecosystem function and processes are key to sustainable food production and use of natural resources
 - Oregonians from individuals to communities seek ways to use natural resources in a sustainable manner. The outcomes of the program are deliverables that can be used by individuals, communities, regulatory and management agencies, and natural resources users to maintain or improve ecosystem health. We assume this knowledge will enable citizens and policy makes to make informed decisions and management choices that allow sustainable use of natural resources.
 - microorganisms are ubiquitous and can be viewed in certain cases as limiting agricultural productivity and in other cases as supporting agricultural productivity.
 - the program also assumes that water resource issues will become even more important to society due to water scarcity or competing uses for finite water resources that will only increase in the future. Watershed enhancement and sustainability affect river restoration and management. The intersecting uses and water interfaces require a wide range of interrelated research and technological approaches within this program. There remains a need to identify the major resource constraint issues and develop models and decision-making tools for all levels of governance. Oregon society takes a great interest in and participate in natural resource issues.

2. Ultimate goal(s) of this Program

To apply scholarship and technology to enhance the capacity of managed and wild landscapes and their biota to adapt to climate change and to optimize the production of ecosystem services, such as: carbon sequestration, wastewater treatment, bioremediation, maintenance of biodiversity, and others

Program objectives

- To generate new knowledge that enhances adaptive capacity to climate change by production and natural systems and communities (noi)
- To improve climate mitigation strategies and their adoption (noi)
- To conduct research to understand, sustainably utilize, and support terrestrial, aquatic, and marine resources and ecosystems.
- To develop our basic soil science knowledge base about the functioning of soils in our world to address current and future issues in a scientifically sound manner.
- To establish biological and other novel control approaches for diseases of agricultural importance,

thereby reducing reliance on more conventional economically and environmentally sensitive and unsustainable practices.

- To address issues associated with the role of microbes in maintaining the health of the Earth and its inhabitants, and in sustaining agricultural productivity.
- To provide water resource management decision-makers with the best scientific and technical information available for addressing the allocation, management and engineering of water resources in the areas of: 1) Improved agricultural water management and 2) Watershed enhancement and sustainability.
- To examine pressing policy issues regarding how land and water are and will be managed in the coming decades, both in rural areas and in the rural-urban interface.
- To inform public and policy makers about changes in ecosystem function and processes that result from natural resources use and to identify ways to minimize negative consequences and develop knowledge and technologies that enable ecosystem restoration.

V(E). Planned Program (Inputs)

1. Estimated Number of professional FTE/SYs to be budgeted for this Program

Year	Extension		Research	
	1862	1890	1862	1890
2013	0.5	0.0	18.0	0.0
2014	0.5	0.0	18.0	0.0
2015	0.5	0.0	18.0	0.0
2016	0.0	0.0	18.0	0.0
2017	0.0	0.0	0.0	0.0

V(F). Planned Program (Activity)

1. Activity for the Program

The program includes studies that focus on development of models of community-level responses to perturbations, population dynamics and habitat management for individual aquatic and terrestrial species, and development of methods for monitoring ecosystem changes. The experimental approaches that will be used to meet the specific objectives of these subprograms include field studies in the Oregon, the Pacific Northwest, the U.S., and abroad. In addition, the experimental approaches will also include controlled laboratory experiments and database/model development.

Theoretical and empirical models will be developed to examine land-use policies and impacts on water quality, wildlife habitat, watershed health, and other ecological indicators. Models will be used to examine how resource and agricultural policy affects major land use and cropping patterns, and how these may affect water quality.

Research is often carried out at field sites in the state, region, nation, or overseas. We will develop and use novel soil-water instrumentation, update and expand the reference evapotranspiration data currently available for Oregon, develop hydrologic models capable of simulating the interactions and processes between surface water and groundwater, conduct laboratory and field observations of physical and biological processes and functions, benthic macroinvertebrate community, numerical and statistical models play critical roles in understanding the driving principles of watershed and river ecosystems and

linkages. Watershed and river basin scale resource simulation models and decision tools will be used to examine coupled natural and human systems and trajectories of change under alternative future scenarios.

In summary:

- conduct research experiments
- collect data
- conduct assessments
- develop monitoring protocols
- develop products, curriculum resources
- conduct workshops & meetings
- present seminars and professional talks
- provide training
- deliver services
- provide counseling
- partnering
- facilitating

2. Type(s) of methods to be used to reach direct and indirect contacts

Extension

Direct Methods	Indirect Methods
<ul style="list-style-type: none"> • Education Class • Workshop • Group Discussion • One-on-One Intervention • Other 1 (peer publications) • Other 2 (presentations) 	<ul style="list-style-type: none"> • Public Service Announcement • Newsletters • TV Media Programs • Web sites other than eXtension • Other 1 (newspaper) • Other 2 (trade magazines)

3. Description of targeted audience

- The general public and those in natural resource-based communities, including growers, ranchers and fishermen
- The research community including scientists working in governmental, industrial, and academic sectors, including biomedical researchers, oceanographers, climatographers, virologists
 - Growers, crop consultants, extension faculty and researchers in the agricultural industry; and ecologists, economists, and managers concerned with invasive species.
 - Salmonid and other fisheries
 - State and federal natural resources management and regulatory agencies, including land managers
 - policy makers.
 - typical citizens in urban settings
 - engineering profession
 - undergraduate and graduate students

V(G). Planned Program (Outputs)

NIFA no longer requires you to report target numbers for standard output measures in the Plan of Work. However, all institutions will report actual numbers for standard output measures in the Annual Report of Accomplishments and Results. The standard outputs for which you must continue to collect data are:

- Number of contacts
 - Direct Adult Contacts
 - Indirect Adult Contacts
 - Direct Youth Contacts
 - Indirect Youth Contact
 - Number of patents submitted
 - Number of peer reviewed publications
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(H). State Defined Outputs

1. Output Measure

- 1. EFFECTS ON AND PROTECTION OF ENVIRONMENTAL HEALTH AND ECOLOGY
1...natural history, e.g., fish life history variation, seasonal distributions of endangered great whales;
2... insect biodiversity, conservation and dynamics; 3...riparian systems and relationships; 4 ... soils factors, fluxes, respiration, landscape evolution, and microbial communities

 - 2. PROVIDE ADDITIONAL UNDERSTANDING FOR PLANT AND ANIMAL PROTECTION FROM DISEASES AND PESTS
1 - biology and control of diseases in plants, e.g., fire blight and blackberry rust, such as genetic mechanisms, disease spread, and effects of landscape variables; 2 - characterization and control of diseases in animals, including fish, mammals and invertebrates; control of invasive pests); 3 - determining appropriate variables and models, including those that increase our knowledge about impacts of and adaptations to climate change.

 - 3. STUDIES TO DECIPHER GENOMES, GENETICS AND MECHANISMS OF PLANTS AND ANIMALS
1 - determine life history strategies through emerging statistical and molecular genetic techniques, including those of marine and estuarine species, such as salmon, groundfish, and oysters; 2 - develop selective breeding programs, repositories, and resource center for various species; 3 - identify aspects of human biology and biotechnology of viruses and bacteria that affect human health

 - 4. PROVIDE TECHNICAL, ECONOMIC AND MARKETING MODELS AND ANALYSES THAT INFORM DECISION-MAKERS, INDUSTRY, AND PEERS
1 - develop models, market mechanisms, and policies for water resources, e.g., agricultural and non-agricultural uses, riparian zones; 2 - develop models to characterize and make predictions about habitat and their adaptations to climate change; 3 - develop models for stock assessment and management

 - 5. DEVELOP EDUCATIONAL STRATEGIES AND DISTANCE EDUCATION OUTLETS TO FURTHER REACH CLIENTELE.
- adults and youth will have increased awareness and knowledge of ecosystem processes and functions and how they may adapt to climate change as well as methods for restoring degraded habitats

 - 6. OTHER SCHOLARLY EXCELLENCE: participation on professional society panels and boards, as well as science panels, and receipt of awards or recognition
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(I). State Defined Outcome

O. No	Outcome Name
1	1. New or better analytical tools, practices, and models for irrigation and water management, soil management, food production, natural resources management, and land-use decisions
2	2. Impacts of land use change on water quality, species and ecosystems
3	3. Best practices for climate change mitigation such as: a) chemical control, b) biological control, c) stock assessments, d) fishery management tools, e) nitrogen applications, f) water use efficiency, g) acres planted for carbon sequestration
4	4. Species, habitat and ecosystem responses to changes in environment as well as resource management strategies to mitigate
5	5. Genetic responses to climate and other environmental factors
6	6. Understand environmental and ecological factors affecting pathogenesis and spread of pathogens and pests
7	7. Understand use of water and production lands
8	8. Improved technologies and practices for control of pests and pathogens in crop and animal production
9	9. New approaches for combating diseases to provide improved health and safety
10	10. Improved strategies are used to manage natural resources
11	11. Understand changes in environments for food systems, e.g., managing plant disease, stable marine food webs
12	12. Understand changes in societal views with regard to the value of habitats and conservation and how to manage them
13	13. Understand changes in ecosystems from carbon management strategies, soil microbial health, natural resource or ecosystem policies
14	A1. New genotypes developed and planted that show enhanced adaptive capacity to climate change
15	14. Show that international trade will be an important vehicle by which adaptations can be made to global climate change *key relationships that tie climate change to the distribution of crop yields, comparative advantage, geography, and international trade. *Numerical estimates regarding how climate change will affect crop prices, production costs, and the economic welfare of producers, consumers, and society at large
16	A2. Conservation strategies adopted, for example: oConservation bio-control strategies are implemented differently and active restoration strategies occur. Land owners and managers assess ecosystem services provided by their riparian restorations via a user-friendly web tool. oGrowers adopt improved, scale-dependent practices selected for various market niches with emphasis on reducing environmental degradation and impact. Commercial small farms will have more diverse and economically viable technologies and production techniques or systems available for their use oGrowers implement drip irrigation and produce more marketable yields of onions, potatoes, and poplar trees than with furrow or sprinkler irrigation, and achieve efficient use of soil nitrate and the other available N sources under drip irrigation. oGeneration of the viral vectors for grapevine disease control and functional genomics vectors have a potential for replacing current strategies of using chemical fungicides and bactericides with viral biocontrol strategies.
17	15 - Understand how climate change will be related to changes in comparative advantage in international crop production, and in turn the pattern and volume of trade.
18	16-New or improved models and understanding about water resources related to organisms, soils, or management systems

Outcome # 1

1. Outcome Target

1. New or better analytical tools, practices, and models for irrigation and water management, soil management, food production, natural resources management, and land-use decisions

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 101 - Appraisal of Soil Resources
- 102 - Soil, Plant, Water, Nutrient Relationships
- 103 - Management of Saline and Sodic Soils and Salinity
- 112 - Watershed Protection and Management
- 135 - Aquatic and Terrestrial Wildlife
- 212 - Pathogens and Nematodes Affecting Plants
- 215 - Biological Control of Pests Affecting Plants
- 311 - Animal Diseases
- 604 - Marketing and Distribution Practices
- 605 - Natural Resource and Environmental Economics
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 2

1. Outcome Target

2. Impacts of land use change on water quality, species and ecosystems

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 112 - Watershed Protection and Management
- 121 - Management of Range Resources
- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 3

1. Outcome Target

3. Best practices for climate change mitigation such as: a) chemical control, b) biological control, c) stock assessments, d) fishery management tools, e) nitrogen applications, f) water use efficiency, g) acres planted for carbon sequestration

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 212 - Pathogens and Nematodes Affecting Plants
- 215 - Biological Control of Pests Affecting Plants
- 604 - Marketing and Distribution Practices
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 4

1. Outcome Target

4. Species, habitat and ecosystem responses to changes in environment as well as resource management strategies to mitigate

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 311 - Animal Diseases
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 5

1. Outcome Target

5. Genetic responses to climate and other environmental factors

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 112 - Watershed Protection and Management
- 121 - Management of Range Resources
- 125 - Agroforestry
- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity

4. Associated Institute Type(s)

- 1862 Research

Outcome # 6

1. Outcome Target

6. Understand environmental and ecological factors affecting pathogenesis and spread of pathogens and pests

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 136 - Conservation of Biological Diversity
- 201 - Plant Genome, Genetics, and Genetic Mechanisms
- 212 - Pathogens and Nematodes Affecting Plants
- 215 - Biological Control of Pests Affecting Plants
- 311 - Animal Diseases
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 7

1. Outcome Target

7. Understand use of water and production lands

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 101 - Appraisal of Soil Resources
- 102 - Soil, Plant, Water, Nutrient Relationships
- 103 - Management of Saline and Sodic Soils and Salinity
- 112 - Watershed Protection and Management
- 121 - Management of Range Resources
- 125 - Agroforestry
- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 8

1. Outcome Target

8. Improved technologies and practices for control of pests and pathogens in crop and animal production

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 201 - Plant Genome, Genetics, and Genetic Mechanisms
- 212 - Pathogens and Nematodes Affecting Plants
- 215 - Biological Control of Pests Affecting Plants
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 9

1. Outcome Target

9. New approaches for combating diseases to provide improved health and safety

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 201 - Plant Genome, Genetics, and Genetic Mechanisms
- 212 - Pathogens and Nematodes Affecting Plants
- 215 - Biological Control of Pests Affecting Plants
- 303 - Genetic Improvement of Animals
- 311 - Animal Diseases
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 10

1. Outcome Target

10. Improved strategies are used to manage natural resources

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 112 - Watershed Protection and Management
- 121 - Management of Range Resources
- 125 - Agroforestry
- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 604 - Marketing and Distribution Practices

- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 11

1. Outcome Target

11. Understand changes in environments for food systems, e.g., managing plant disease, stable marine food webs

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 101 - Appraisal of Soil Resources
- 102 - Soil, Plant, Water, Nutrient Relationships
- 112 - Watershed Protection and Management
- 121 - Management of Range Resources
- 125 - Agroforestry
- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 201 - Plant Genome, Genetics, and Genetic Mechanisms
- 212 - Pathogens and Nematodes Affecting Plants
- 215 - Biological Control of Pests Affecting Plants
- 302 - Nutrient Utilization in Animals
- 303 - Genetic Improvement of Animals
- 311 - Animal Diseases
- 604 - Marketing and Distribution Practices
- 605 - Natural Resource and Environmental Economics
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 12

1. Outcome Target

12. Understand changes in societal views with regard to the value of habitats and conservation and how to manage them

2. Outcome Type : Change in Condition Outcome Measure

3. Associated Knowledge Area(s)

- 101 - Appraisal of Soil Resources
- 102 - Soil, Plant, Water, Nutrient Relationships
- 112 - Watershed Protection and Management
- 121 - Management of Range Resources
- 125 - Agroforestry
- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 13

1. Outcome Target

13. Understand changes in ecosystems from carbon management strategies, soil microbial health, natural resource or ecosystem policies

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 101 - Appraisal of Soil Resources
- 102 - Soil, Plant, Water, Nutrient Relationships
- 103 - Management of Saline and Sodic Soils and Salinity
- 112 - Watershed Protection and Management
- 121 - Management of Range Resources
- 125 - Agroforestry
- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 14

1. Outcome Target

A1. New genotypes developed and planted that show enhanced adaptive capacity to climate change

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 201 - Plant Genome, Genetics, and Genetic Mechanisms

4. Associated Institute Type(s)

- 1862 Research

Outcome # 15

1. Outcome Target

14. Show that international trade will be an important vehicle by which adaptations can be made to global climate change

*key relationships that tie climate change to the distribution of crop yields, comparative advantage, geography, and international trade.

*Numerical estimates regarding how climate change will affect crop prices, production costs, and the economic welfare of producers, consumers, and society at large

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 604 - Marketing and Distribution Practices
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 16

1. Outcome Target

A2. Conservation strategies adopted, for example:

oConservation bio-control strategies are implemented differently and active restoration strategies occur. Land owners and managers assess ecosystem services provided by their riparian restorations via a user-friendly web tool.

oGrowers adopt improved, scale-dependent practices selected for various market niches with emphasis on reducing environmental degradation and impact. Commercial small farms will have more diverse and economically viable technologies and production techniques or systems available for their

use

oGrowers implement drip irrigation and produce more marketable yields of onions, potatoes, and poplar trees than with furrow or sprinkler irrigation.and achieve efficient use of soil nitrate and the other available N sources under drip irrigation.

oGeneration of the viral vectors for grapevine disease control and functional genomics vectors have a potential for replacing current strategies of using chemical fungicides and bactericides with viral biocontrol strategies.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 112 - Watershed Protection and Management
- 121 - Management of Range Resources
- 125 - Agroforestry
- 135 - Aquatic and Terrestrial Wildlife
- 136 - Conservation of Biological Diversity
- 604 - Marketing and Distribution Practices
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 17

1. Outcome Target

15 - Understand how climate change will be related to changes in comparative advantage in international crop production, and in turn the pattern and volume of trade.

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 604 - Marketing and Distribution Practices
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 18

1. Outcome Target

16-New or improved models and understanding about water resources related to organisms, soils, or management systems

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 112 - Watershed Protection and Management
- 135 - Aquatic and Terrestrial Wildlife
- 605 - Natural Resource and Environmental Economics

4. Associated Institute Type(s)

- 1862 Research

V(J). Planned Program (External Factors)

1. External Factors which may affect Outcomes

- Natural Disasters (drought, weather extremes, etc.)
- Economy
- Appropriations changes
- Public Policy changes
- Government Regulations
- Competing Public priorities
- Competing Programmatic Challenges
- Populations changes (immigration, new cultural groupings, etc.)
- Other (climatic or environmental condit)

Description

- US immigration policy affects the ability of students to come to the US for advanced study.
- The short-term nature of many funding sources and rapidity with which research priorities seem to change does not allow for long-term research or research with longer-term economic benefit.
- An assessment of the impacts of policy on land and water use is critically dependent on the policies in place at present and other policies that are to be implemented or are under consideration. Likewise, unexpected legal rulings can suddenly create policy issues that demand analysis and educational programs for the public and policymakers.
- Unanticipated changes in marine and fishery laws could influence adaptation, as could major changes in market and or resource stock conditions, and changes in the state and coastal economies. Public opinion is also a powerful force in determining both state and federal resource commitments necessary to sustain this program.

Consequently, it is critically important that those implementing this program have the flexibility to react to important new policy initiatives that may become important over the next five years. A critical component for this research program is funding at all levels. Further, in view of the strong reliance for the delivery of this program on competitively obtained grant funds, continuing success and productivity will depend on the success of each subprogram in remaining competitive. This is done by conducting

relevant research and by communicating and disseminating the results of that research, so that the new knowledge may be used by other scientists for further research or for the good of society.

V(K). Planned Program - Planned Evaluation Studies

Description of Planned Evaluation Studies

Evaluations of the projects and efforts of this program occur on a regular basis through the grant-award process. Grants are awarded on the basis of past productivity and the relevance and quality of planned experiments. Further, evaluation of results occur in the form of reports that list productivity of each subprogram (and of the program as a whole) in terms of articles published in journals or other venues, conference communications, patents awarded, etc. and other forms of productivity and recognition generated by activities.

Other evaluation studies include During, Before-After and After-Only evaluations. The most prevalent data collection Methodologies are the sampling, observation, on-site survey.

V(A). Planned Program (Summary)

Program # 3

1. Name of the Planned Program

Global Food Security and Hunger

2. Brief summary about Planned Program

As the world's human population grows, land and water resources increasingly will be expected to provide not only food and fiber in sustainable production systems, but also "ecosystem services" to maintain the health of the planet. Sustainable agricultural systems must be economically viable, utilize ecological principles that preserve environmental quality, enhance food safety and security, and promote healthy communities. A combination of approaches will be needed to ensure production of food, fiber, and fuels in a sustainable fashion, despite decreasing availability of water, labor, and land. Increasing market demand require growers to meet new sustainability standards in order to maintain access to markets, as well as creating new market opportunities for integrated farming and food systems that support rural and urban economic development. Outcomes of research may include development of new plant varieties, support of sustainable production systems, new knowledge about agroecosystems, a wide range of plants developed for use in the delivery of plant-based ecosystem solutions to environmental problems, sustainable use of aquatic and marine ecosystems, new engineering schemes, new economic methods of valuation, new agricultural policies, and others.

3. Program existence : Intermediate (One to five years)

4. Program duration : Long-Term (More than five years)

5. Expending formula funds or state-matching funds : Yes

6. Expending other than formula funds or state-matching funds : Yes

V(B). Program Knowledge Area(s)

V(C). Planned Program (Situation and Scope)**1. Situation and priorities**

For agriculture and food systems to be economically viable for the long term, they need to utilize ecological principles that preserve environmental quality, enhance food safety and security, and promote healthy communities. A combination of integrative, ecological and technology-based approaches will be necessary to produce nutritious food, fiber, horticultural crops, and biofuels with reduced chemical and

energy inputs on less available farmland and rangeland and with decreasing availability of water and labor. Increasing labor costs and availability concern producers of high-value crops; they seek technologies that will reduce their dependence on migrant labor and increase their efficiencies. Continued urban development will accelerate competition for existing land and water resources; global climate change may further jeopardize water supplies.

Citizens are increasingly concerned about food safety and the source of their food. There are enormous educational opportunities for people to understand the local and international food system, from the development of a crop to its production and processing to its transport and handling prior to purchase. Further, the importance of local food systems that address the food quality and security issues is growing. Strengthening local food systems is an important opportunity for positive economic and community development.

There are also increasing expectations for compliance to certification standards for market access. Enabling accurate prediction of plant diseases and pests will impact their control by allowing more specific, economical and integrated measures to be utilized. There will be increased scrutiny of the carbon footprint made by various production-distribution systems and market or regulatory forces will require reduction in carbon emissions and a reduced water footprint. Programs are needed to further the development and understanding of ecologically and technologically robust farming systems that function within a sustainable local, regional and international food system. The end user, consumers, will also be an important consideration.

This program serves the following goals and objectives:

1. expand domestic market opportunities
2. increase efficiency of agricultural production and marketing systems
3. expand economic opportunities
4. reduce the number and severity of agricultural pest and disease outbreaks
5. ensure clean, abundant water and clean, healthy air
6. enhance soil quality to maintain productive working lands
7. protect, enhance, and manage forests and rangelands
8. protect and enhance wildlife habitat.

2. Scope of the Program

- In-State Extension
- In-State Research
- Multistate Research
- Multistate Extension
- Integrated Research and Extension
- Multistate Integrated Research and Extension

V(D). Planned Program (Assumptions and Goals)

1. Assumptions made for the Program

Faculty members will effectively collaborate with professional peers on the various OSU campuses, university and governmental scientists in the state, region and the country and with peers around the world. They work with county extension faculty and with commodity commission and grower association

leaders. They converse directly with end users of their products. They are members of successful regional and national competitive grant consortia. Through this array of contacts they have a keen awareness of local, state, regional, national and international research needs in crop production practices, pest management, and alternative crops.

2. Ultimate goal(s) of this Program

This interdisciplinary program will develop, enhance and apply improved tools of agronomy, plant pathology, soil science, weed science, animal science, biology, and social science to sustainably address challenges facing agricultural producers of food, feed, fiber, and horticulture. It is expected that our efforts will enhance the capacity of the global food system; and produce a more sustainable, diverse and resilient food system.

We will:

- To examine the fundamental molecular mechanisms critical to plant production and associated agricultural practice.
 - To conduct molecular and field programs concerning the control of pathogens and nematodes affecting crops of commercial importance.
 - To improve plant product quality and utility through understanding of plant genomes, genetics, genetic mechanisms, and genetic resources.
 - To understand plants and plant ecology to improve biological efficiencies and reduce abiotic stresses, disease resistance, and/or the way plants function with landscape ecosystems (HORT-basic)
 - To improve reproductive efficiency in domestic animals and birds
 - To develop sustainable animal production systems while maintaining the natural resources that support animal production
 - To identify disease mechanisms, animal models, vaccines, and antibiotic resistance that mitigate the consequences of animal disease in agricultural and food systems
 - To develop and apply the best tools in contemporary plant, soil, genetics, biology and pest management sciences to address the challenges and opportunities facing Oregon's agricultural industry, plant science and natural resource communities
 - To develop and apply improved research and Extension tools in agronomy, plant pathology, soil science, weed science and biology to address the challenges facing Oregon's dryland crop producers.
 - Improve competitiveness in domestic production, processing, and marketing.
 - Enhance the quality of the environment through better understanding of and building on agriculture's and forestry's complex links with soil, water, air, and biotic resources.
 - To address issues relative the sustainable management of range/forest resources for biological diversity and the maintenance of rural economies that depend upon natural resources for industry
 - To improve horticultural management systems by integrating practices, cultivars, and technologies to achieve greater efficiencies, integrated pest management, organic production, and products that meet market and consumer demand while considering impacts on the environment, worker protection, and human health or livelihoods
 - To analyze the comparative advantage of U.S. agricultural and food industries
 - To determine the impact of integrating leadership and literacy in secondary agricultural education programs

V(E). Planned Program (Inputs)

1. Estimated Number of professional FTE/SYs to be budgeted for this Program

Year	Extension		Research	
	1862	1890	1862	1890
2013	1.0	0.0	35.0	0.0
2014	1.0	0.0	35.0	0.0
2015	1.0	0.0	35.0	0.0
2016	0.0	0.0	0.0	0.0
2017	0.0	0.0	0.0	0.0

V(F). Planned Program (Activity)

1. Activity for the Program

Organic, value-added, and technological (bio-based, information-centered, robotic, nanotechnology, etc.) approaches complement conventional agriculture. By utilizing contemporary research tools in agronomy, animal or soil science, plant nutrition and pest management this program will develop improved practices for cropping and animal production systems that will enhance the potential use of alternative crops, reduce soil erosion, reduce the economic, social, and environmental costs of crop pests, and maintain or increase soil biological, chemical and physical properties. Animal systems will reduce wastes and discharges while improving productivity and husbandry techniques.

Research and extension will also look at key areas of various social changes in the marketplace impacting producers, retailers and consumers. The research aims to determine (1) how technology impacts producers/retailers/consumers in the market place, with a special emphasis on rural markets in America; (2) how society impacts consumer demand for goods and services with a goal of improving the well-being of consumers; and (3) how to develop economic linkages among producers, retailers, and consumers for the community development.

In addition, a broad coalition of agricultural, environmental and food groups has coalesced around the need for integrated efforts for sustainable agriculture and food systems information, research, and education. Outcomes include more economically and ecologically sustainable farms and ranches; a more resilient rural economy; stronger bonds between rural, urban, and periurban residents; and a healthier environment for all Oregonians.

- Conduct Research Experiments.
- Conduct surveys
- Conduct Workshops, Meetings.
- Deliver Services.
- Develop Products, Curriculum, Resources.
- Provide Training.
- Provide Demonstrations
- Provide Counseling.
- Assessments.
- Work with Media.
- Partnering.
- Facilitating.

2. Type(s) of methods to be used to reach direct and indirect contacts

Extension

Direct Methods	Indirect Methods
<ul style="list-style-type: none"> ● Education Class ● Workshop ● Group Discussion ● One-on-One Intervention ● Demonstrations ● Other 1 (publications) ● Other 2 (presentations) 	<ul style="list-style-type: none"> ● Newsletters ● Web sites other than eXtension ● Other 1 (trade magazines)

3. Description of targeted audience

- Professional peers and scientific communities, extension faculty, veterinarians, vaccine producers
- State commodity commissions, grower groups, packers, crop consultants
- Natural resource industry clientele - growers, field representatives, grower co-ops and partnerships, processors and handlers, export companies, importing companies
- County, state and federal agencies - USDA-ARS, Oregon Department of Agriculture, Natural Resources Conservation Service, Bureau of Indian Affairs, Confederated Tribes of the Umatilla Indian Reservation, US Forest Service, and Bureau of Land Management.
- Policy makers, public health officials, and community leaders
- Teachers and students, Extension personnel and other educators
- Genetic companies
- Nutritional consultants
- Nonprofit conservation groups and ecologists
- General public and consumers

V(G). Planned Program (Outputs)

NIFA no longer requires you to report target numbers for standard output measures in the Plan of Work. However, all institutions will report actual numbers for standard output measures in the Annual Report of Accomplishments and Results. The standard outputs for which you must continue to collect data are:

- Number of contacts
 - Direct Adult Contacts
 - Indirect Adult Contacts
 - Direct Youth Contacts
 - Indirect Youth Contact
 - Number of patents submitted
 - Number of peer reviewed publications
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(H). State Defined Outputs

1. Output Measure

- BASIC PHYSIOLOGY OF PLANTS AND ANIMALS...1- Environmental response by plants, 2 - Animal reproductive factors
- DECIPHER GENOMES, GENETICS AND MECHANISMS...1- Niches and functions served by Bacteria And Viruses And Other Microorganisms, 2 - Genetic diversity, pathways and function, 3 - Genes and Mechanisms in disease resistance and tolerances, 4 - Reproductive factors in plants and animals
- BREEDING PROGRAMS THAT RESULT IN DESIRABLE TRAITS, CULTIVARS AND VARIETIES...Indicator - improved traits, germplasm, and varieties.
- IMPROVED ANIMAL AND PLANT PRODUCTION SYSTEMS...1 - improved animal reproductive success rates, 2 - animal nutrition, feeding and forage relationships, 3 - inputs for plant systems in dryland and irrigated production and on small farms

- PLANT AND ANIMAL PROTECTION FROM DISEASES AND PESTS...1 - pest management systems and strategies, 2 - disease resistance, 3 - herbicide identification and resistance

- ENVIRONMENTAL HEALTH AND ECOLOGY...1 - erosion control, 2 - animal effects, 3 - green management practices

- ECONOMIC AND MARKETING MODELS AND ANALYSES THAT INFORM DECISION-MAKERS, INDUSTRY, AND PEERS...1 - land use management analyses, 2 - profitability and productivity studies

- VOLUNTEER PROGRAMS
 - oReach Master Gardners (new, past, and current) through MG training programs and materials, websites, and other distance education programs
 - oRefine OSU Urban and Community Horticulture Website to reach new audiences.
- DISTANCE and OTHER EDUCATION OUTLETS
 - oDevelop new databases and frequently most asked questions for eXtension
 - oCompare perceptions of science teachers and agriculture teachers on integrating science into the agriculture curriculum
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(I). State Defined Outcome

O. No	Outcome Name
1	1a. improved plant production management systems, including precision systems, cultural practices, conservation strategies, innovations, pest control, and organic systems
2	2a - improved animal reproductive biology and management for better fertility and reduced uterine infections in dairy and beef cattle and sheep; as well as better understanding of reproductive genetics and developmental biology
3	2b - expanded forage and nutrient management knowledge to understand how management practices can synchronize the relationship between forage nutrient supply and cow nutrient requirements, and how feedstuffs can influence the health and physiological stress of the calf.
4	4a - plant breeding for improved or novel plant attributes and for human health benefits, e.g., antioxidants
5	5a - develop optimum pest management by identifying factors affecting herbicide activity, registering herbicides, controlling weeds in organic and no-till production; learning basic pest biology, registering new pesticides, finding application rates, and identifying risks associated with a pest as it becomes established
6	6a - economic studies help Producer groups learn about factors shaping global markets and productivity-convergence effects on US agricultural and processed food production and trade
7	A4 - Adoption of new varieties will reduce yield losses and expenses, rejuvenate orchards, achieve better productivity and efficiency, provide environmental benefits (less fungicide applications, etc.), allow effective competitiveness on the world market oCommercial processors and fresh market growers, as well as home gardeners, achieve greater production efficiency, more stable productivity, and reduced costs from the use of improved varieties.
8	2c - improved animal fertility and genetic stock, for example: oProducers and animal health professionals improve fertility and prevent uterine infections in dairy cattle from implementing every-day on-farm practices. oIndustry stores sperm cells with minimal loss of function for use as a commodity and for long-term maintenance of genetic stock
9	A3 - Animal producers improve their economic competitive advantage and improve the ecological sustainability of production system
10	A1 - Conservation strategies adopted oConservation bio-control strategies are implemented differently and active restoration strategies occur. Land owners and managers assess ecosystem services provided by their riparian restorations via a user-friendly web tool. oGrowers adopt improved, scale-dependent practices selected for various market niches with emphasis on reducing environmental degradation and impact. Commercial small farms will have more diverse and economically viable technologies and production techniques or systems available for their use oGrowers implement drip irrigation and produce more marketable yields of onions, potatoes, and poplar trees than with furrow or sprinkler irrigation and achieve efficient use of soil nitrate and the other available N sources under drip irrigation. oGeneration of the viral vectors for grapevine disease control and functional genomics vectors have a potential for replacing current strategies of using chemical fungicides and bactericides with viral biocontrol strategies.
11	A6a - Improved agricultural economies oThe knowledge generated about productivity-convergence will be crucial in designing policies to improve the welfare of agricultural producers and food processors and the general public who will be affected by the evolution of these industries (e.g., food quality and safety, resource scarcity and pollution). oDomestic policymaking and multilateral trade negotiations will mitigate effects of climate change in reduction of trade barriers and subsidies. oClimate change will be related to changes in comparative advantage in international crop production, and in turn the pattern and volume of trade. This information will be important in the context of domestic policymaking and multilateral trade negotiations as it pertains to reduction of trade barriers and subsidies.

<p>12</p>	<p>Change Indicator 1 - Ecological / Environmental</p> <ul style="list-style-type: none"> oLandscapes will impact the way Oregonians use and manage plants to create beauty, modify environment, and improve health and well-being of individuals and communities. This program will change the way people use plants to modify their environment such as moderating temperature on buildings, improving water infiltration on surfaces, contributing to ecosystem services at landscape or watershed scales, etc. oFood/farm systems reduce surface and/or groundwater or other pollution in the environment, while improving nutrient and water budgets, and organic production systems. oNew reduced risk, environmentally safer pest control tools will be available that are target pest specific will facilitate the implementation of IPM programs. oEnvironmental change will occur from temperature modifications; enhanced water conservation and wildlife; reduced runoff, fire incidence and pests; improved nutrient use and recycling; and other ecosystem services. oBetter ecological methodologies will lead to more social, economic, and environmental benefits and cost effective and sustainable restoration. Improved valuation of ecological services associated with restorations will greatly facilitate market-based conservation practices such as mitigation banking and effluent trading. Better conservation bio-control strategies will decrease the costs associated with insect losses and the use of insecticides. oenhance the nation's natural resource base and environment by revealing cost-effective means to control plant diseases and reduce the need for pesticides. oBiocontrols will reduce environmental damage and costs of grape growing and facilitate the development of the table and wine grapes with improved quality and nutritional value and therefore to increase competitiveness of the US grape growers and wine makers at the world markets. oImproved soil, water, and crop management practices and strategies that protect Oregon resources oManagement of public and private rangelands will sustain and improve ecological values as desired by the public and the rural communities that depend on the natural resources. oStrategies for avoiding invasive pests will be in place oPlant disease resistance will lower the amount of pesticide use, resulting in a more healthful environment and reduced exposure of humans to hazardous chemicals.
<p>13</p>	<p>Change Indicator 2 - Societal</p> <ul style="list-style-type: none"> oSocial change will occur through new perceptions of green technologies and social value or capital of horticultural landscapes to enhance human health, therapy, wellness, and social networks. oSocial impacts include consumer awareness and appreciation of the abundance of locally grown ornamental plant materials and native species for use in landscapes will increase; also awareness of invasive species. oSocial change will enhance quality of life in rural areas by improving economic stability of family farms, wineries, wine tasting, and tourism with new practices and cropping systems and/or livestock management practices/systems. oSocial change will improve economic stability of families and quality of life with improved cropping systems. oWorker safety with bio-based pest control and dwarf rootstocks (short ladders) will be improved; farm workers will find other employment with increased mechanization. Local and community markets increase social networking in rural communities. oIncreased opportunities for rural community marketers and processors will be developed; oPublic health will be improved through the use of crops with improved nutritional value oSustainable and economically viable wheat and dryland cropping industry for vibrant rural economy in eastern Oregon oThe public has access to an ongoing research data base that allows for natural resource/land management decisions to have a fundamental basis in science.

14	<p>Change Indicator 3 - Economic</p> <ul style="list-style-type: none"> oThe economic value of landscapes will increase. Cost and benefit analyses of plants usage to modify environments with green technologies will reveal positive economic impacts and improved health and wellness from horticultural therapy. oEconomic impacts include reduced costs, increased benefits, and production efficiencies from use of water and nutrient budgets in recycled water systems, improved pest management, and diagnosis of plant problems to increase sales of quality products. Costs of regulatory procedures will be reduced with water and nutrient budgets and management systems. oProfitability of berry crops in Oregon is expected to improve as new cropping systems, cultivars, practices, and efficiencies are implemented. Machine harvest technologies will be adapted or developed for Oregon to reduce production costs and improve competitiveness in global markets. oProfitability of vegetable and specialized seed crops is expected to improve as new cropping systems, cover crops, nitrogen management, reduced tillage, and cultivars are adopted by growers. Communication networks will enable timely communication and utilization of technologies to alert growers of weather related pest incidence, educational events, and practices. oProfitability of viticulture in Oregon is expected to improve as new cropping systems, cultivars, practices, and efficiencies are implemented. Niche markets, wine tasting, and tourism are primary outlets for Oregon wines. oProfitability of tree fruits and nut crops in Oregon is expected to improve as new cropping systems, cultivars, practices, and efficiencies are implemented. High density orchards are expected to improve production efficiencies and increase markets. oAgricultural producers will realize greater economic return in their cropping enterprises; Plant nutrient and other production input use will be optimized oProducers maximize the control of postharvest decay within the various production and marketing objectives of producers. oBiocontrols will reduce environmental damage and costs of grape growing and facilitate the development of the table and wine grapes with improved quality and nutritional value and therefore to increase competitiveness of the US grape growers and wine makers at the world markets. oHigher-value niche markets will be established oBeef producers in the Intermountain and Great Basin areas remain competitive on a regional, national, and global basis. oProducers greatly improve their reproductive efficiency by removing bad genes thus increasing productivity and economics of the industry. Industry thus has improved resource and economic sustainability through reduced costs and/or increased productivity. oBetter understanding of the costs, benefits, and potential impact of legislation on the dairy industry, and thus more economically and environmentally sustainable systems for dairy and beef production. oIntense selection reduces needs for assistance in pasture lambing conditions. oEconomic viability of farmers markets will be enhanced oAgricultural producers will realize greater economic return in their enterprises; oIncreased potato yield will increase potato farmers' income as well as the stability of potato production of the world. The potential increase from 29,000 acres to as much as 100,000 acres will increase Oregon's market share and economic benefits.
15	<p>1b - sustainable gardening practices (eg. fertilizers, water, and pest management including organic), horticulture and aboriculture principles and practicea</p>
16	<p>1c - dryland production management systems use agronomic practices for commercially promising alternative crops under reduced tillage.</p> <ul style="list-style-type: none"> *Producers, NRCS, conservation districts and environmental agencies learn about whole farm nutrient management. *Basic agronomic practices for commercially promising alternative crops under reduced tillage systems.
17	<p>1d - irrigated production management systems use drip and micro sprinkler irrigation systems to produce increased crop yield and crop quality with less water and nitrogen than with furrow and regular sprinkler irrigation</p>

18	6b - improved knowledge of consumer and market conditions and factors that affect business survival and competitiveness - Improved understanding of market conditions and knowledge to determine business choices. - Development of a process map for food business development and planning. - Training of nascent and existing food entrepreneurs in food business management. -Expanded knowledge base of factors important to distinguish different types of consumers and their food choices -Develop an understanding of motivations for food choice and strategies to impact them - Improved marketing approaches for local markets and community food systems
19	4c - identify genes involved in critical plant processes to improve plant qualities
20	5b - Improved information about biology, control and resistance of viral, bacterial, fungal diseases, especially disease reproduction, transport and spread; postharvest decay; models to predict risk; and relationships between disease susceptibility and disease resistance
21	5c - Elucidation of the underlying molecular mechanisms of pathogenicity (virulence), disease susceptibility (compatibility) and disease development, gene evolution, and engineered gene expression vectors
22	7 - integrate agricultural education into high school curriculums and community education
23	A2 - Plant management tools are used by private and public sector, for example: *Farmers will more strategically plan for crop production *Crop rotation sequences and green manure crops in combination with reduced or no nematicide use, particularly for short season potato crops to suppress nematode populations.
24	A5 - pest and pathogen management tools are used by growers, for example: *End users adopt new pesticide and pest management systems and strategies for working with invasive pests *District-specific control programs will reduce usage of fungicides with low efficacy and emphasize integrated control practices. *Growers, packers and extension faculty incorporate practices to lower decay risk, including reduced fungicide usage, and identify high risk fruit lots and to market these before decay has time to develop in storage. *Interaction of program components and the overall efficacy of various combinations of orchard, postharvest, and storage factors will be the guides to the description of programs for implementation in the pear industry. *Determine packinghouse water system contamination by fungal pathogens. Commercial service lab can apply PCR technology to maintain sanitation determine most effective fungicides for each species. *Customized decay control program for each unique pathogen complex.
25	A7 - Agricultural education produces the next generation of growers and educators
26	A6b - Consumer business knowledge leads to improved opportunities, survival, and profitability in food enterprises, as well as new and improved value-added products -New and existing businesses expand markets based on new understanding about market factors -Increased business activity and success in the Northwest food industries. -More successful starts by food businesses
27	1e - protection of natural environment from agricultural chemicals, for example: -Reduce the fate of agricultural chemicals in remote aquatic ecosystems -Improve policies or regulation of pesticides
28	4b - create new plant varieties for improved attributes

Outcome # 1

1. Outcome Target

1a. improved plant production management systems, including precision systems, cultural practices, conservation strategies, innovations, pest control, and organic systems

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 111 - Conservation and Efficient Use of Water
- 202 - Plant Genetic Resources
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 2

1. Outcome Target

2a - improved animal reproductive biology and management for better fertility and reduced uterine infections in dairy and beef cattle and sheep; as well as better understanding of reproductive genetics and developmental biology

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 301 - Reproductive Performance of Animals
- 302 - Nutrient Utilization in Animals
- 307 - Animal Management Systems
- 601 - Economics of Agricultural Production and Farm Management

4. Associated Institute Type(s)

- 1862 Research

Outcome # 3

1. Outcome Target

2b - expanded forage and nutrient management knowledge to understand how management practices can synchronize the relationship between forage nutrient supply and cow nutrient requirements, and how feedstuffs can influence the health and physiological stress of the calf.

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 111 - Conservation and Efficient Use of Water

- 121 - Management of Range Resources
- 302 - Nutrient Utilization in Animals
- 307 - Animal Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 4

1. Outcome Target

4a - plant breeding for improved or novel plant attributes and for human health benefits, e.g., antioxidants

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 202 - Plant Genetic Resources
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 206 - Basic Plant Biology

4. Associated Institute Type(s)

- 1862 Research

Outcome # 5

1. Outcome Target

5a - develop optimum pest management by identifying factors affecting herbicide activity, registering herbicides, controlling weeds in organic and no-till production; learning basic pest biology, registering new pesticides, finding application rates, and identifying risks associated with a pest as it becomes established

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 202 - Plant Genetic Resources
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 6

1. Outcome Target

6a - economic studies help Producer groups learn about factors shaping global markets and productivity-convergence effects on US agricultural and processed food production and trade

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 601 - Economics of Agricultural Production and Farm Management
- 603 - Market Economics
- 607 - Consumer Economics
- 803 - Sociological and Technological Change Affecting Individuals, Families, and Communities

4. Associated Institute Type(s)

- 1862 Research

Outcome # 7

1. Outcome Target

A4 - Adoption of new varieties will reduce yield losses and expenses, rejuvenate orchards, achieve better productivity and efficiency, provide environmental benefits (less fungicide applications, etc.), allow effective competitiveness on the world market

oCommercial processors and fresh market growers, as well as home gardeners, achieve greater production efficiency, more stable productivity, and reduced costs from the use of improved varieties.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 202 - Plant Genetic Resources
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 8

1. Outcome Target

2c - improved animal fertility and genetic stock, for example:

oProducers and animal health professionals improve fertility and prevent uterine infections in dairy cattle from implementing every-day on-farm practices.

oIndustry stores sperm cells with minimal loss of function for use as a commodity and for long-term maintenance of genetic stock

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 301 - Reproductive Performance of Animals
- 302 - Nutrient Utilization in Animals
- 307 - Animal Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 9

1. Outcome Target

A3 - Animal producers improve their economic competitive advantage and improve the ecological sustainability of production system

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 111 - Conservation and Efficient Use of Water
- 121 - Management of Range Resources
- 302 - Nutrient Utilization in Animals
- 307 - Animal Management Systems
- 601 - Economics of Agricultural Production and Farm Management

4. Associated Institute Type(s)

- 1862 Research

Outcome # 10

1. Outcome Target

A1 - Conservation strategies adopted

oConservation bio-control strategies are implemented differently and active restoration strategies occur. Land owners and managers assess ecosystem services provided by their riparian restorations via a user-friendly web tool.

oGrowers adopt improved, scale-dependent practices selected for various market niches with emphasis on reducing environmental degradation and impact. Commercial small farms will have more diverse and economically viable technologies and production techniques or systems available for their use

oGrowers implement drip irrigation and produce more marketable yields of onions, potatoes, and poplar trees than with furrow or sprinkler irrigation.and achieve efficient use of soil nitrate and the other available N sources under drip irrigation.

oGeneration of the viral vectors for grapevine disease control and functional genomics vectors have a potential for replacing current strategies of using chemical fungicides and bactericides with viral biocontrol strategies.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 111 - Conservation and Efficient Use of Water
- 121 - Management of Range Resources
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 216 - Integrated Pest Management Systems
- 511 - New and Improved Non-Food Products and Processes
- 601 - Economics of Agricultural Production and Farm Management
- 602 - Business Management, Finance, and Taxation
- 803 - Sociological and Technological Change Affecting Individuals, Families, and Communities

4. Associated Institute Type(s)

- 1862 Research

Outcome # 11

1. Outcome Target

A6a - Improved agricultural economies

oThe knowledge generated about productivity-convergence will be crucial in designing policies to improve the welfare of agricultural producers and food processors and the general public who will be affected by the evolution of these industries (e.g., food quality and safety, resource scarcity and pollution).

oDomestic policymaking and multilateral trade negotiations will mitigate effects of climate change in reduction of trade barriers and subsidies.

oClimate change will be related to changes in comparative advantage in international crop production, and in turn the pattern and volume of trade. This information will be important in the context of domestic policymaking and multilateral trade negotiations as it pertains to reduction of trade barriers and subsidies.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 601 - Economics of Agricultural Production and Farm Management
- 602 - Business Management, Finance, and Taxation
- 603 - Market Economics
- 607 - Consumer Economics
- 803 - Sociological and Technological Change Affecting Individuals, Families, and Communities

4. Associated Institute Type(s)

- 1862 Research

Outcome # 12

1. Outcome Target

Change Indicator 1 - Ecological / Environmental

oLandscapes will impact the way Oregonians use and manage plants to create beauty, modify environment, and improve health and well-being of individuals and communities. This program will change the way people use plants to modify their environment such as moderating temperature on buildings, improving water infiltration on surfaces, contributing to ecosystem services at landscape or watershed scales, etc.

oFood/farm systems reduce surface and/or groundwater or other pollution in the environment, while improving nutrient and water budgets, and organic production systems.

oNew reduced risk, environmentally safer pest control tools will be available that are target pest specific will facilitate the implementation of IPM programs.

oEnvironmental change will occur from temperature modifications; enhanced water conservation and wildlife; reduced runoff, fire incidence and pests; improved nutrient use and recycling; and other ecosystem services.

oBetter ecological methodologies will lead to more social, economic, and environmental benefits and cost effective and sustainable restoration. Improved valuation of ecological services associated with restorations will greatly facilitate market-based conservation practices such as mitigation banking and

effluent trading. Better conservation bio-control strategies will decrease the costs associated with insect losses and the use of insecticides.

oEnhance the nation's natural resource base and environment by revealing cost-effective means to control plant diseases and reduce the need for pesticides.

oBiocontrols will reduce environmental damage and costs of grape growing and facilitate the development of the table and wine grapes with improved quality and nutritional value and therefore to increase competitiveness of the US grape growers and wine makers at the world markets.

oImproved soil, water, and crop management practices and strategies that protect Oregon resources

oManagement of public and private rangelands will sustain and improve ecological values as desired by the public and the rural communities that depend on the natural resources.

oStrategies for avoiding invasive pests will be in place

oPlant disease resistance will lower the amount of pesticide use, resulting in a more healthful environment and reduced exposure of humans to hazardous chemicals.

2. Outcome Type : Change in Condition Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 111 - Conservation and Efficient Use of Water
- 121 - Management of Range Resources
- 202 - Plant Genetic Resources
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 216 - Integrated Pest Management Systems
- 302 - Nutrient Utilization in Animals
- 307 - Animal Management Systems
- 601 - Economics of Agricultural Production and Farm Management

4. Associated Institute Type(s)

- 1862 Research

Outcome # 13

1. Outcome Target

Change Indicator 2 - Societal

oSocial change will occur through new perceptions of green technologies and social value or capital of horticultural landscapes to enhance human health, therapy, wellness, and social networks.

oSocial impacts include consumer awareness and appreciation of the abundance of locally grown ornamental plant materials and native species for use in landscapes will increase; also awareness of invasive species.

oSocial change will enhance quality of life in rural areas by improving economic stability of family farms, wineries, wine tasting, and tourism with new practices and cropping systems and/or livestock management practices/systems.

oSocial change will improve economic stability of families and quality of life with improved cropping systems.

- oWorker safety with bio-based pest control and dwarf rootstocks (short ladders) will be improved; farm workers will find other employment with increased mechanization. Local and community markets increase social networking in rural communities.
- oIncreased opportunities for rural community marketers and processors will be developed;
- oPublic health will be improved through the use of crops with improved nutritional value
- oSustainable and economically viable wheat and dryland cropping industry for vibrant rural economy in eastern Oregon
- oThe public has access to an ongoing research data base that allows for natural resource/land management decisions to have a fundamental basis in science.

2. Outcome Type : Change in Condition Outcome Measure

3. Associated Knowledge Area(s)

- 216 - Integrated Pest Management Systems
- 601 - Economics of Agricultural Production and Farm Management
- 602 - Business Management, Finance, and Taxation
- 603 - Market Economics
- 607 - Consumer Economics
- 803 - Sociological and Technological Change Affecting Individuals, Families, and Communities

4. Associated Institute Type(s)

- 1862 Research

Outcome # 14

1. Outcome Target

Change Indicator 3 - Economic

- oThe economic value of landscapes will increase. Cost and benefit analyses of plants usage to modify environments with green technologies will reveal positive economic impacts and improved health and wellness from horticultural therapy.
- oEconomic impacts include reduced costs, increased benefits, and production efficiencies from use of water and nutrient budgets in recycled water systems, improved pest management, and diagnosis of plant problems to increase sales of quality products. Costs of regulatory procedures will be reduced with water and nutrient budgets and management systems.
- oProfitability of berry crops in Oregon is expected to improve as new cropping systems, cultivars, practices, and efficiencies are implemented. Machine harvest technologies will be adapted or developed for Oregon to reduce production costs and improve competitiveness in global markets.
- oProfitability of vegetable and specialized seed crops is expected to improve as new cropping systems, cover crops, nitrogen management, reduced tillage, and cultivars are adopted by growers. Communication networks will enable timely communication and utilization of technologies to alert growers of weather related pest incidence, educational events, and practices.
- oProfitability of viticulture in Oregon is expected to improve as new cropping systems, cultivars, practices, and efficiencies are implemented. Niche markets, wine tasting, and tourism are primary outlets for Oregon wines.
- oProfitability of tree fruits and nut crops in Oregon is expected to improve as new cropping systems, cultivars, practices, and efficiencies are implemented. High density orchards are expected to improve

production efficiencies and increase markets.

oAgricultural producers will realize greater economic return in their cropping enterprises; Plant nutrient and other production input use will be optimized

oProducers maximize the control of postharvest decay within the various production and marketing objectives of producers.

oBiocontrols will reduce environmental damage and costs of grape growing and facilitate the development of the table and wine grapes with improved quality and nutritional value and therefore to increase competitiveness of the US grape growers and wine makers at the world markets.

oHigher-value niche markets will be established

oBeef producers in the Intermountain and Great Basin areas remain competitive on a regional, national, and global basis.

oProducers greatly improve their reproductive efficiency by removing bad genes thus increasing productivity and economics of the industry. Industry thus has improved resource and economic sustainability through reduced costs and/or increased productivity.

oBetter understanding of the costs, benefits, and potential impact of legislation on the dairy industry, and thus more economically and environmentally sustainable systems for dairy and beef production.

oIntense selection reduces needs for assistance in pasture lambing conditions.

oEconomic viability of farmers markets will be enhanced

oAgricultural producers will realize greater economic return in their enterprises;

oIncreased potato yield will increase potato farmers' income as well as the stability of potato production of the world. The potential increase from 29,000 acres to as much as 100,000 acres will increase Oregon's market share and economic benefits.

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 205 - Plant Management Systems
- 216 - Integrated Pest Management Systems
- 601 - Economics of Agricultural Production and Farm Management
- 602 - Business Management, Finance, and Taxation
- 603 - Market Economics
- 607 - Consumer Economics
- 803 - Sociological and Technological Change Affecting Individuals, Families, and Communities

4. Associated Institute Type(s)

- 1862 Research

Outcome # 15

1. Outcome Target

1b - sustainable gardening practices (eg. fertilizers, water, and pest management including organic), horticulture and aboriculture principles and practicea

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 111 - Conservation and Efficient Use of Water
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 16

1. Outcome Target

1c - dryland production management systems use agronomic practices for commercially promising alternative crops under reduced tillage.

*Producers, NRCS, conservation districts and environmental agencies learn about whole farm nutrient management.

*Basic agronomic practices for commercially promising alternative crops under reduced tillage systems.

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 111 - Conservation and Efficient Use of Water
- 202 - Plant Genetic Resources
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 216 - Integrated Pest Management Systems
- 601 - Economics of Agricultural Production and Farm Management

4. Associated Institute Type(s)

- 1862 Research

Outcome # 17

1. Outcome Target

1d - irrigated production management systems use drip and micro sprinkler irrigation systems to produce increased crop yield and crop quality with less water and nitrogen than with furrow and regular

sprinkler irrigation

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 111 - Conservation and Efficient Use of Water
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 18

1. Outcome Target

6b - improved knowledge of consumer and market conditions and factors that affect business survival and competitiveness

- Improved understanding of market conditions and knowledge to determine business choices.
- Development of a process map for food business development and planning.
- Training of nascent and existing food entrepreneurs in food business management.
- Expanded knowledge base of factors important to distinguish different types of consumers and their food choices
- Develop an understanding of motivations for food choice and strategies to impact them
- Improved marketing approaches for local markets and community food systems

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 601 - Economics of Agricultural Production and Farm Management
- 602 - Business Management, Finance, and Taxation
- 603 - Market Economics
- 607 - Consumer Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 19

1. Outcome Target

4c - identify genes involved in critical plant processes to improve plant qualities

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 204 - Plant Product Quality and Utility (Preharvest)
- 206 - Basic Plant Biology

4. Associated Institute Type(s)

- 1862 Research

Outcome # 20

1. Outcome Target

5b - Improved information about biology, control and resistance of viral, bacterial, fungal diseases, especially disease reproduction, transport and spread; postharvest decay; models to predict risk; and relationships between disease susceptibility and disease resistance

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 202 - Plant Genetic Resources
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 21

1. Outcome Target

5c - Elucidation of the underlying molecular mechanisms of pathogenicity (virulence), disease susceptibility (compatibility) and disease development, gene evolution, and engineered gene expression vectors

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 202 - Plant Genetic Resources
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 22

1. Outcome Target

7 - integrate agricultural education into high school curriculums and community education

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 803 - Sociological and Technological Change Affecting Individuals, Families, and Communities

4. Associated Institute Type(s)

- 1862 Research

Outcome # 23

1. Outcome Target

A2 - Plant management tools are used by private and public sector, for example:

*Farmers will more strategically plan for crop production

*Crop rotation sequences and green manure crops in combination with reduced or no nematicide use, particularly for short season potato crops to suppress nematode populations.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 111 - Conservation and Efficient Use of Water
- 205 - Plant Management Systems
- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 24

1. Outcome Target

A5 - pest and pathogen management tools are used by growers, for example:

*End users adopt new pesticide and pest management systems and strategies for working with invasive pests

*District-specific control programs will reduce usage of fungicides with low efficacy and emphasize integrated control practices.

*Growers, packers and extension faculty incorporate practices to lower decay risk, including reduced fungicide usage, and identify high risk fruit lots and to market these before decay has time to develop in storage.

*Interaction of program components and the overall efficacy of various combinations of orchard, postharvest, and storage factors will be the guides to the description of programs for implementation in the pear industry.

*Determine packinghouse water system contamination by fungal pathogens. Commercial service lab can apply PCR technology to maintain sanitation determine most effective fungicides for each species.

*Customized decay control program for each unique pathogen complex.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 25

1. Outcome Target

A7 - Agricultural education produces the next generation of growers and educators

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 111 - Conservation and Efficient Use of Water
- 121 - Management of Range Resources
- 202 - Plant Genetic Resources
- 205 - Plant Management Systems

- 216 - Integrated Pest Management Systems
- 803 - Sociological and Technological Change Affecting Individuals, Families, and Communities

4. Associated Institute Type(s)

- 1862 Research

Outcome # 26

1. Outcome Target

A6b - Consumer business knowledge leads to improved opportunities, survival, and profitability in food enterprises, as well as new and improved value-added products

- New and existing businesses expand markets based on new understanding about market factors
- Increased business activity and success in the Northwest food industries.
- More successful starts by food businesses

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 502 - New and Improved Food Products
- 601 - Economics of Agricultural Production and Farm Management
- 602 - Business Management, Finance, and Taxation
- 603 - Market Economics
- 607 - Consumer Economics
- 803 - Sociological and Technological Change Affecting Individuals, Families, and Communities

4. Associated Institute Type(s)

- 1862 Research

Outcome # 27

1. Outcome Target

1e - protection of natural environment from agricultural chemicals, for example:

- Reduce the fate of agricultural chemicals in remote aquatic ecosystems
- Improve policies or regulation of pesticides

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 205 - Plant Management Systems
- 206 - Basic Plant Biology

- 216 - Integrated Pest Management Systems

4. Associated Institute Type(s)

- 1862 Research

Outcome # 28

1. Outcome Target

4b - create new plant varieties for improved attributes

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 102 - Soil, Plant, Water, Nutrient Relationships
- 111 - Conservation and Efficient Use of Water
- 202 - Plant Genetic Resources
- 204 - Plant Product Quality and Utility (Preharvest)
- 205 - Plant Management Systems
- 206 - Basic Plant Biology
- 601 - Economics of Agricultural Production and Farm Management

4. Associated Institute Type(s)

- 1862 Research

V(J). Planned Program (External Factors)

1. External Factors which may affect Outcomes

- Natural Disasters (drought, weather extremes, etc.)
- Economy
- Appropriations changes
- Public Policy changes
- Government Regulations
- Competing Public priorities
- Competing Programmatic Challenges

Description

The level of funding or relative importance that our collaborating agencies, e.g., USDA FS or BLM, put on research will be important for our continued success. Likewise, we are also dependent on competitive grant funds such as USDA SARE/NRI. As a result, our continuing success and productivity will depend on the success of each subprogram in remaining competitive. Success with competitive

grants will depend on our publication track record, relevance of proposed research and the ability of the federal government to continue funding these important research programs.

Government subsidies and programs can dramatically affect crop production. If subsidies exist for the production of a particular crop, despite long-term economic projections, acreage can be driven toward that crop. As fuel and fertilizer prices climb, growers may be forced to make production decisions based on available dollars versus any other factors. US immigration policy will affect the labor force available for field and processing work. US immigration policy affects the ability of students to come to the US for advanced study.

Where plans of work include field studies (resistance tests, pesticide trials, seed bulking, etc.), weather can always affect outcomes. Where plans of work include laboratory studies, results can be influenced by building infrastructure and repair of equipment. Turnover of personnel can disrupt progress, but can also bring opportunities for new investigators with different skill sets.

Economics and public policy are the critical. Changing or stricter rules on domestic productivity versus marketing (for imported commodities) create hardship for domestic growers in a global market.

Public concerns may result in the untimely removal of certain classes of pesticides from use before effective alternatives are identified.

The unintended introduction or identification of internationally quarantined pests could result in wholesale loss of the value of some agricultural enterprises - recent examples in other areas include Karnal bunt in wheat and mad cow disease

Niche marketing to foreign countries is dependent on the balance of trade between the US and that country. If many goods are being shipped by container to the US and empty containers are available for the return shipment, shipment of small quantities of bulk materials can be affordable.

V(K). Planned Program - Planned Evaluation Studies

Description of Planned Evaluation Studies

Most of the evaluation will be retrospective. Much of the professional output from the program would qualify as scholarship implying a peer review process, validation and publication in journals. Publications, survey documents to assess adoption and Oregon Ag Invests will be utilized in evaluation.

In 2011, OAES began indepth discussions with faculty about building in more evaluative components into their projects. Thematic teams were being established to develop better outcome measures and indicators to fit station projects and the strategic goals of the station, affiliated colleges, and the university, while also addressing USDA priorities.

V(A). Planned Program (Summary)

Program # 4

1. Name of the Planned Program

Food Safety

2. Brief summary about Planned Program

Future lifestyles will emphasize maintenance of health and preventing diseases that now limit the human lifespan. As our understanding of the complex relationships between diet and health expands, markets for safe, highly nutritious foods and for functional foods and biopharmaceuticals that have disease prevention and health promotion effects will grow. Our existing strengths in the areas such as biotechnology and genomics, agricultural production systems, food processing and food safety, environmental toxicology and agricultural marketing, trade, and economics position the Oregon Agricultural Experiment Station to further understand and develop the agriculture and food system in Oregon and the region. A combination of conventional, organic, and biotechnology-based approaches will provide an array of strategies for sustainable production of nutritionally enhanced crops and food. These agricultural and food products will ensure a range of marketing niches for producers while providing the consumer with robust choices within a safe and secure food system. Research will support producers and marketers in the production of certified organic and health-enhanced foods. Research will also provide analyses of health effects of agricultural and environmental chemicals as well as the use of foods and phytonutrients to maintain well-being. Expanded consumer education about the relationships of food, nutrition, and health will provide U.S. citizens with information for making individual choices among an array of foods and food products. Development, enhancement and adoption of technologies and strategies for food traceability will enhance food safety and agricultural competitiveness.

3. Program existence : Intermediate (One to five years)

4. Program duration : Long-Term (More than five years)

5. Expending formula funds or state-matching funds : Yes

6. Expending other than formula funds or state-matching funds : Yes

V(B). Program Knowledge Area(s)

1. Program Knowledge Areas and Percentage

KA Code	Knowledge Area	%1862 Extension	%1890 Extension	%1862 Research	%1890 Research
133	Pollution Prevention and Mitigation	5%		5%	
204	Plant Product Quality and Utility (Preharvest)	5%		5%	
306	Environmental Stress in Animals	5%		5%	
308	Improved Animal Products (Before Harvest)	5%		5%	
311	Animal Diseases	5%		5%

712	Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins	5%		5%	
723	Hazards to Human Health and Safety	5%		5%	
724	Healthy Lifestyle	5%		5%	
	Total	100%		100%	

V(C). Planned Program (Situation and Scope)

1. Situation and priorities

Future lifestyles will emphasize maintenance of health and preventing diseases that now limit human lifespan. Markets will grow for safe, highly nutritious foods and for functional foods and biopharmaceuticals that have disease prevention and health promotion effects such as anti-oxidant, anti-toxic, cancer-inhibiting, and anti-inflammatory properties.

Dairy, livestock and poultry producers are interested in finding natural products that meet the public's interest in healthy foods and will enhance animal health without having to rely on antibiotics or other pharmaceuticals. There is also interest in obtaining omega-3 fatty acids through animal products. Therefore producers have a need for nutritional strategies and for organic natural products that will enhance animal health and production and still allow the animal products they produce to qualify as natural and/or organic.

Agricultural chemicals are one of many tools used to ensure an abundant food supply. Judicious use of agricultural chemicals demands practical knowledge of their fate and effects in agricultural and natural ecosystems. The vast majority of chemicals that are present in the environment as a consequence of their manufacture, use, or intentional consumption (e.g. food additives) have not been tested for their toxicity or efficacy. There is a profound need develop a new strategy for testing xenobiotics as well as chemicals found in the human environment, and understanding the mechanism of chemical action to find safer use of beneficial chemical supplements. Further, responsible use of soil, air and water resources for the production of food, feed and fiber must be balanced with the need to minimize impacts on human health, and preserve natural ecosystems and the biodiversity they support.

Foodborne disease outbreaks traced to seafood consumption and that of fresh fruits and vegetables is of continuing concern in the U.S. Advocated as part of a healthy diet, coupled with a growing consumer preference for minimally handled and processed food, results in a need to develop new and more product-specific technologies designed to curtail microbial contamination and decomposition with these foods. Strategies and technologies for tracing food as it moves through the food system is also of increasing importance.

Value-added processing or further manufacturing and marketing of agricultural-based products offer considerable potential for expansion, economic growth and job creation in the region, but businesses need information to tackle perceived high risk.

Enrichment of fresh fruits with calcium, zinc, vitamin E or other PACs may increase the intake of these nutrients, thereby decreasing the need for nutritional supplements. Knowledge of the chemical constituents, pharmacokinetics, and metabolic pathways will augment and enhance our ability to prevent chronic disease and extend health-span. An understanding of which components are degraded or enhanced during processing will enable delivery of more potent forms of natural foods and food ingredients. Other important health issues in the U.S. include cancer and obesity which result in loss of lives, as well as high health care costs and loss of productivity in the work force.

2. Scope of the Program

- In-State Extension
- In-State Research
- Multistate Research
- Multistate Extension
- Integrated Research and Extension
- Multistate Integrated Research and Extension

V(D). Planned Program (Assumptions and Goals)

1. Assumptions made for the Program

The Oregon agricultural landscape is changing, and the need for differentiating Oregon products through nutrient-enhanced parameters is key to assuring success in the marketplace. There is growing interest in identifying the specific chemoprotective constituents and their mechanisms of action. For example, zinc plays an important role in protecting cellular components from oxidation and damage to DNA and may play an important role in prostate cancer development. There may be other important minerals and foods that provide protection. Concentrates of fruits and vegetables are hoped to be able to act as natural anti-oxidants, prevent the onset of cancer, and inhibit atherosclerosis, heart disease, and arthritis. We assume development of this knowledge will enable citizens and policy makers to make informed decisions and management choices that allow sustainable use of natural resources.

Oregon and other states of the Northwest produce have a particularly diversified agricultural production base with few crops that can be produced efficiently for the commodity market. This situation drives a need for value-added and niche market products to accomplish economic sustainability for agricultural producers and food processors. The development and adaptation of new food technologies requires today broader and deeper knowledge of food properties and accurate estimations of the response of quality attributes in foods to conventional and new non-thermal processes. The Oregon industry alone cannot respond to these demands, as new and improved technologies generate new engineering challenges requiring further research. Advances in these areas may optimally be achieved by OSU researchers working independently and also in collaboration with other research institutions in the U.S., and with the food processing industry.

How Oregon's resources are managed to assure food is available, affordable, safe, and produced in a manner that sustains the health of people and the environment depends, in part, on improved understanding of the potential for adverse impacts of practices employed in agriculture and related industries.

2. Ultimate goal(s) of this Program

The goal of this program is to develop wholesome, secure, high value/ high quality and safe food supply that yield successful and profitable Northwest producers and processing industries. Long-term objectives within this program include:

- To advance fundamental knowledge about food, nutrition, and health.
- To develop viable technologies to improve food safety (noi).
- To reduce incidences of foodborne illness (noi).
- To inform the public and policy makers about risks and benefits of agricultural and emerging chemical uses. This entails robust analyses of data deriving from research of these investigators and that available from work within the broader scientific community.
 - To understand the health effects of microbial and environmental chemical sources (noi).
 - To identify, develop, and/or validate trace analytical methods, characterize reaction pathways and transformation rates, and determine impacts for agricultural chemicals and other contaminants, as well as biomarkers.
 - To enhance human and animal health, well-being, and survivability with the use of nutrition and nutrigenomics and development of organic production.
 - To evaluate mechanisms by which feed supplements are able to contribute to improved fatty acid metabolism or to augment innate and acquired immunity in domestic animals.
 - To improve the success and profitability of Northwest food producing, marketing and processing industries through research and education in consumer economics, sensory and consumer preferences, and value-added product development.

(FIC, FST, ANS, COMES, EMT, CVM)

V(E). Planned Program (Inputs)

1. Estimated Number of professional FTE/SYs to be budgeted for this Program

Year	Extension		Research	
	1862	1890	1862	1890
2013	1.0	0.0	10.0	0.0
2014	1.0	0.0	10.0	0.0
2015	1.0	0.0	10.0	0.0
2016	0.0	0.0	0.0	0.0
2017	0.0	0.0	0.0	0.0

V(F). Planned Program (Activity)

1. Activity for the Program

This program will result in multiple outputs as a result of the following proposed activities:

- Conducting laboratory, pilot-plant experiments and data collection
- Conducting research experiments
- Developing knowledge and new technology of food processing systems
- Developing curricular materials
- Developing quality monitoring protocols
- Developing products, curriculum, resources
- Developing services
- Presenting seminars and professional talks
- Conducting workshops and training sessions
- Publishing scientific findings
- Partnering

2. Type(s) of methods to be used to reach direct and indirect contacts

Extension

Direct Methods	Indirect Methods
<ul style="list-style-type: none"> • Education Class • Workshop • Group Discussion • One-on-One Intervention • Demonstrations • Other 1 (publications) • Other 2 (presentations) 	<ul style="list-style-type: none"> • Public Service Announcement • Newsletters • TV Media Programs • Web sites other than eXtension

3. Description of targeted audience

There are diverse audiences for information this project generates. They can be classified into four general groups: (1) the general public and food consumers; (2) state and federal food regulatory agencies; and (3) the research community including scientists working in government, industry, and academic sectors; and (4) the commercial food processing industry or commodity groups.

V(G). Planned Program (Outputs)

NIFA no longer requires you to report target numbers for standard output measures in the Plan of Work. However, all institutions will report actual numbers for standard output measures in the Annual Report of Accomplishments and Results. The standard outputs for which you must continue to collect data are:

- Number of contacts
 - Direct Adult Contacts
 - Indirect Adult Contacts
 - Direct Youth Contacts
 - Indirect Youth Contact
 - Number of patents submitted
 - Number of peer reviewed publications
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(H). State Defined Outputs

1. Output Measure

- IMPROVED ANIMAL AND PLANT PRODUCTION SYSTEMS...1 - number of experiments or tests to reduce percentage of mortality, to enhance hatchability, or to identify a marker of immunity
 - EFFECTS ON AND PROTECTION OF HUMAN and ENVIRONMENTAL/ECOLOGICAL HEALTH...1 - Agricultural/Environmental chemical analyses to
 - assess risks of toxins
 - develop analytical methods and biomarkers for agricultural chemicals and other contaminants
 - evaluate the variation and patterns in the incidence of human pesticide exposures
 - identify, validate, localize and characterize specific responsive genes, which have the potential to serve as biomarkers of toxins
 - develop and evaluate transgenic lines that show changes in reporter gene expression in response to toxicants
 - TECHNOLOGY, MODELS AND ANALYSES THAT INFORM DECISION-MAKERS, INDUSTRY, AND PEERS REGARDING FOOD PRODUCTS...1 - determine best food processing technology and method for food product development and safety, including high pressure processing, laser technology, and radio frequency identification tags, 2 - develop value-added products through a systematic product development strategy
 - OTHER SCHOLARLY EXCELLENCE: participation on professional boards and panels, as well as science panels, awards, etc.
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(I). State Defined Outcome

O. No	Outcome Name
1	2a - Characterize and model toxins arising from food production and processing (analytical) *New analytical methods and biomarkers to cost-effectively identify and track agricultural chemicals and other contaminants through time and space <u>*Develop and transgenic lines of zebrafish for response to toxicants</u>
2	3 - Methods to improve Animal Health production systems, for example through - improvement of maternal diet - enhancement of the efficacy of vaccination programs <u>-development of diagnostic methods to assess immune health</u>
3	A2 - Percentage of health risks reduced due to information regarding toxins arising from food <u>production and processing</u>
4	A4 - Improved food handling and regulations -Individuals and industry modify food production and handling practices. -Intervention strategies reduce bacterial contamination, increase shelf life, and reduce occurrences of <u>food-borne illnesses.</u>
5	A3 - Improved animal husbandry, such as -Poultry industry changes feed formulations to reduce embryonic mortality during incubation (thereby enhancing hatchability) and to improve animal health and to produce health-enhancing nutrients (thus developing value-added poultry foods). -Livestock producers use diagnostic methods and new vaccination programs to increase immunity (innate and acquired) in domestic animals
6	A6 - Informed policy-making and management related to food processing that prevent incidences of <u>food-borne illnesses.</u>
7	Change Indicator - Economic: -Application of knowledge and new leading-edge food technologies will result in improved food quality, value and safety with positive impacts on value-added food production, processing, handling, and distribution systems. -Sustainable competitive advantage for Northwest food industries that are able to accurately gage consumer demand for their products. -Improve the food economy by developing new, stronger, and growing food businesses in the state. -Help reduce the state's unemployment through the creation of jobs in these food companies. -Hatchability and value-added poultry foods will bring increased economic returns to the US poultry industry.
8	Change Indicator - Societal: -Better human and animal health, well-being, and survivability result with the use of nutrition and nutrigenomics and organic production. -Reduce health care costs associated with prostate cancer and improve the quality of life of thousands of American men . -Control the growth in the rate of obesity and osteoporosis among youth and solutions reverse trends in childhood obesity -Build environmental public health capacity -Mitigate how federal expenditures related to the farm subsidy program are linked to Medicaid <u>expenditures for obesity related health conditions.</u>
9	Change Indicator - Environmental (risk assessment, policies and management of exposure): -Enhanced environmental quality within an economically responsible context. -Reduced exposure of human and aquatic organisms to fluorochemicals -Moderate the relative contribution of regional U.S. and Canadian agricultural sources (both current and historic uses of these chemicals) and long-range or global sources in contributing to the deposition of agricultural chemicals to remote ecosystems in the Western U.S. <u>-Minimize the risk of adverse impact of pesticide use on human health.</u>
10	1 - Understanding nutritional relationships to health, such as a) learn the mechanisms behind the health benefits of fruits and vegetables, and b) new risk factors in prostate cancer and novel dietary modifications to reduce the incidence of prostate cancer.

11	2b- Characterize and model toxins arising from food production and processing (mechanisms, effects) *Identify agents, mechanisms, and dose response for reducing fetal risk from toxic chemicals *evaluate dioxin toxicity to humans and characterize specific responsive genes to toxicants *Examine mechanisms that underlie the immune suppression *Identify role of polymorphisms and mediators in relieving dioxin toxicity *Evaluate effects of aging on bioavailability of agricultural contaminants *Determine ways to evaluate extent that landfills are a significant source of fluorochemicals and the extent to which they are present in crops intended for human consumption
12	2c - Characterize and model toxins arising from food production and processing (education) *Provide technical training and resources to agricultural and regulatory stakeholders on ecotoxicology of pesticides and integrated pest, nutrient, and water management.
13	A1 - Nutritional health or additives provide disease mitigation, e.g., zinc supplementation will be an effective strategy in limiting the incidence of prostate cancer and effective dietary intervention strategies are broadly applied to reduce obesity
14	4 - Develop technologies and control strategies to improve food safety
15	5 - Detect incidences and pathways of food borne illnesses to: * reduce regulatory actions * reduce potential economic loss from diminished productivity * reduce incidences reported and absences due to illness.
16	6 - Prepare information about food processing that informs policy makers and managers

Outcome # 1

1. Outcome Target

2a - Characterize and model toxins arising from food production and processing (analytical)
 *New analytical methods and biomarkers to cost-effectively identify and track agricultural chemicals and other contaminants through time and space
 *Develop and transgenic lines of zebrafish for response to toxicants

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 133 - Pollution Prevention and Mitigation
- 314 - Toxic Chemicals, Poisonous Plants, Naturally Occurring Toxins, and Other Hazards Affecting Animals
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 2

1. Outcome Target

3 - Methods to improve Animal Health production systems, for example through
 - improvement of maternal diet
 - enhancement of the efficacy of vaccination programs
 -development of diagnostic methods to assess immune health

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 308 - Improved Animal Products (Before Harvest)
- 311 - Animal Diseases

4. Associated Institute Type(s)

- 1862 Research

Outcome # 3

1. Outcome Target

A2 - Percentage of health risks reduced due to information regarding toxins arising from food production and processing

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 702 - Requirements and Function of Nutrients and Other Food Components
- 703 - Nutrition Education and Behavior
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

Outcome # 4

1. Outcome Target

A4 - Improved food handling and regulations

-Individuals and industry modify food production and handling practices.

-Intervention strategies reduce bacterial contamination, increase shelf life, and reduce occurrences of food-borne illnesses.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 204 - Plant Product Quality and Utility (Preharvest)
- 314 - Toxic Chemicals, Poisonous Plants, Naturally Occurring Toxins, and Other Hazards Affecting Animals
- 501 - New and Improved Food Processing Technologies
- 702 - Requirements and Function of Nutrients and Other Food Components
- 703 - Nutrition Education and Behavior
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

Outcome # 5

1. Outcome Target

A3 - Improved animal husbandry, such as

-Poultry industry changes feed formulations to reduce embryonic mortality during incubation (thereby enhancing hatchability) and to improve animal health and to produce health-enhancing nutrients (thus developing value-added poultry foods).

-Livestock producers use diagnostic methods and new vaccination programs to increase immunity (innate and acquired) in domestic animals

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 306 - Environmental Stress in Animals
- 308 - Improved Animal Products (Before Harvest)
- 311 - Animal Diseases

4. Associated Institute Type(s)

- 1862 Research

Outcome # 6

1. Outcome Target

A6 - Informed policy-making and management related to food processing that prevent incidences of food-borne illnesses.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 133 - Pollution Prevention and Mitigation
- 314 - Toxic Chemicals, Poisonous Plants, Naturally Occurring Toxins, and Other Hazards Affecting Animals
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 7

1. Outcome Target

Change Indicator - Economic:

-Application of knowledge and new leading-edge food technologies will result in improved food quality, value and safety with positive impacts on value-added food production, processing, handling, and distribution systems.

-Sustainable competitive advantage for Northwest food industries that are able to accurately gauge consumer demand for their products.

-Improve the food economy by developing new, stronger, and growing food businesses in the state.

-Help reduce the state's unemployment through the creation of jobs in these food companies.

-Hatchability and value-added poultry foods will bring increased economic returns to the US poultry industry.

2. Outcome Type : Change in Condition Outcome Measure

3. Associated Knowledge Area(s)

- 501 - New and Improved Food Processing Technologies
- 502 - New and Improved Food Products
- 602 - Business Management, Finance, and Taxation
- 603 - Market Economics
- 606 - International Trade and Development
- 607 - Consumer Economics

4. Associated Institute Type(s)

- 1862 Research

Outcome # 8

1. Outcome Target

Change Indicator - Societal:

- Better human and animal health, well-being, and survivability result with the use of nutrition and nutrigenomics and organic production.
- Reduce health care costs associated with prostate cancer and improve the quality of life of thousands of American men .
- Control the growth in the rate of obesity and osteoporosis among youth and solutions reverse trends in childhood obesity
- Build environmental public health capacity
- Mitigate how federal expenditures related to the farm subsidy program are linked to Medicaid expenditures for obesity related health conditions.

2. Outcome Type : Change in Condition Outcome Measure

3. Associated Knowledge Area(s)

- 204 - Plant Product Quality and Utility (Preharvest)
- 314 - Toxic Chemicals, Poisonous Plants, Naturally Occurring Toxins, and Other Hazards Affecting Animals
- 502 - New and Improved Food Products
- 702 - Requirements and Function of Nutrients and Other Food Components
- 703 - Nutrition Education and Behavior
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

Outcome # 9

1. Outcome Target

Change Indicator - Environmental (risk assessment, policies and management of exposure):

- Enhanced environmental quality within an economically responsible context.
- Reduced exposure of human and aquatic organisms to fluorochemicals
- Moderate the relative contribution of regional U.S. and Canadian agricultural sources (both current and historic uses of these chemicals) and long-range or global sources in contributing to the deposition of agricultural chemicals to remote ecosystems in the Western U.S.
- Minimize the risk of adverse impact of pesticide use on human health.

2. Outcome Type : Change in Condition Outcome Measure

3. Associated Knowledge Area(s)

- 133 - Pollution Prevention and Mitigation
- 306 - Environmental Stress in Animals
- 314 - Toxic Chemicals, Poisonous Plants, Naturally Occurring Toxins, and Other Hazards Affecting Animals
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 10

1. Outcome Target

1 - Understanding nutritional relationships to health, such as a) learn the mechanisms behind the health benefits of fruits and vegetables, and b) new risk factors in prostate cancer and novel dietary modifications to reduce the incidence of prostate cancer.

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 702 - Requirements and Function of Nutrients and Other Food Components
- 703 - Nutrition Education and Behavior
- 723 - Hazards to Human Health and Safety
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

Outcome # 11

1. Outcome Target

2b- Characterize and model toxins arising from food production and processing (mechanisms, effects)

*Identify agents, mechanisms, and dose response for reducing fetal risk from toxic chemicals

*evaluate dioxin toxicity to humans and characterize specific responsive genes to toxicants

*Examine mechanisms that underlie the immune suppression

*Identify role of polymorphisms and mediators in relieving dioxin toxicity

*Evaluate effects of aging on bioavailability of agricultural contaminants

*Determine ways to evaluate extent that landfills are a significant source of fluorochemicals and the extent to which they are present in crops intended for human consumption

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 501 - New and Improved Food Processing Technologies
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety

4. Associated Institute Type(s)

- 1862 Research

Outcome # 12

1. Outcome Target

2c - Characterize and model toxins arising from food production and processing (education)

*Provide technical training and resources to agricultural and regulatory stakeholders on ecotoxicology of pesticides and integrated pest, nutrient, and water management.

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 703 - Nutrition Education and Behavior
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

Outcome # 13

1. Outcome Target

A1 - Nutritional health or additives provide disease mitigation, e.g., zinc supplementation will be an effective strategy in limiting the incidence of prostate cancer and effective dietary intervention strategies are broadly applied to reduce obesity

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 502 - New and Improved Food Products
- 702 - Requirements and Function of Nutrients and Other Food Components

- 703 - Nutrition Education and Behavior
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

Outcome # 14

1. Outcome Target

4 - Develop technologies and control strategies to improve food safety

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 501 - New and Improved Food Processing Technologies
- 502 - New and Improved Food Products
- 703 - Nutrition Education and Behavior
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

Outcome # 15

1. Outcome Target

5 - Detect incidences and pathways of food borne illnesses to:
* reduce regulatory actions
* reduce potential economic loss from diminished productivity
* reduce incidences reported and absences due to illness.

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 501 - New and Improved Food Processing Technologies
- 502 - New and Improved Food Products
- 607 - Consumer Economics
- 703 - Nutrition Education and Behavior
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

Outcome # 16

1. Outcome Target

6 - Prepare information about food processing that informs policy makers and managers

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 314 - Toxic Chemicals, Poisonous Plants, Naturally Occurring Toxins, and Other Hazards Affecting Animals
- 501 - New and Improved Food Processing Technologies
- 502 - New and Improved Food Products
- 702 - Requirements and Function of Nutrients and Other Food Components
- 703 - Nutrition Education and Behavior
- 711 - Ensure Food Products Free of Harmful Chemicals, Including Residues from Agricultural and Other Sources
- 712 - Protect Food from Contamination by Pathogenic Microorganisms, Parasites, and Naturally Occurring Toxins
- 723 - Hazards to Human Health and Safety
- 724 - Healthy Lifestyle

4. Associated Institute Type(s)

- 1862 Research

V(J). Planned Program (External Factors)

1. External Factors which may affect Outcomes

- Natural Disasters (drought, weather extremes, etc.)
- Economy
- Appropriations changes
- Public Policy changes
- Government Regulations
- Competing Public priorities
- Competing Programmatic Challenges
- Populations changes (immigration, new cultural groupings, etc.)

Description

This program focuses in part on increasing understanding and knowledge of food product development, that is, food processing technologies (edible coatings, vacuum infusion and high pressure processing), microbial detection methods for research/food production, food chemistry, and sensory quality. Multiple external factors inform decisions regarding priorities for research and extension activities. Recent food recall incidents, media exposure, or current "hot topics" can drive the food research agenda. Agricultural commodity groups, state natural resource agencies, the major food processing industry, and consumer interest groups influence allocation of state and federal funds through the legislative process. They also sponsor research directly.

This program also focuses on increasing understanding about transfer, fate, and effects of environmental contaminants, especially those transmitted through the production of food. Our efforts look at food quality and safety, water quality, and sustainability of ecosystem structure and organization that provides society beneficial uses.

Multiple external factors inform decisions regarding priorities for research and extension activities. Agricultural commodity groups, state natural resource agencies, Native American Tribes, and environmental interest groups influence allocation of state funds through the legislative process. They also sponsor research directly.

Scientific peer review panels are especially important in directing federal support for research and extension. Public opinion is also a powerful force in determining both state and federal resource commitments necessary to sustain this program.

V(K). Planned Program - Planned Evaluation Studies

Description of Planned Evaluation Studies

Most evaluation will be retrospective. Efforts will be evaluated based on the stated objectives, and the entire programmatic project will undergo periodic evaluation. The evaluation process will assess project planning, project implementation and project outcomes. Publications, survey to assess adoption and Oregon Ag Invests will be utilized in evaluation. Numbers of manuscripts and theses will be tabulated for the Program. Reactions of peer review panels to grant applications is another means for evaluation of research initiatives. Faculty departments record each submission and our accounting system tracks awards. Reviews of total intramural and extramural funding occurs on a semi-annual basis. Data collection will occur as appropriate in accordance with the expected outcomes.

V(A). Planned Program (Summary)

Program # 5

1. Name of the Planned Program

Childhood Obesity

2. Brief summary about Planned Program

The nation is going through many changes in the market, environment, economy, and politics, leading various social changes in the marketplace. Drastic changes in the marketplace, especially in rural America, have threatened the well-being of rural community residents and the economic survival of rural producers and retailers. In order to improve the economic vitality of rural America and thus well-being of the community, research is needed to identify the current problems faced by rural businesses and consumers, and further, to develop the business strategy to assist rural businesses to gain economic competitiveness. Rapid technology development has been a critical change that has threatened the survival of rural communities that lack resources and knowledge to be responsive to changes in technology. Thus, there is a pressing need to address how rural communities can respond to the changes in the marketplace as a result of technological development. As the contribution of agriculture and manufacturing to rural community has declined, the importance of rural retail business to improve the economic well-being of community becomes critical.

3. Program existence : Intermediate (One to five years)

4. Program duration : Long-Term (More than five years)

5. Expending formula funds or state-matching funds : Yes

6. Expending other than formula funds or state-matching funds : Yes

V(B). Program Knowledge Area(s)

1. Program Knowledge Areas and Percentage

KA Code	Knowledge Area	%1862 Extension	%1890 Extension	%1862 Research	%1890 Research
610	Domestic Policy Analysis	40%		40%	
802	Human Development and Family Well-Being	60%		60%	
	Total	100%		100%	

V(C). Planned Program (Situation and Scope)

1. Situation and priorities

Over the past two decades, three changes have dramatically affected the viability and health of rural communities and the prospects for work opportunities of rural populations. First, globalization and macroeconomic policies have led to a major restructuring of the rural economy with many traditional rural jobs in agriculture, forestry, textiles and furniture manufacturing moving overseas. Second, and related to the restructuring, migration patterns - both domestic and international (legal and illegal) - have brought about major shifts in both population numbers and the ethnic composition in rural communities across the land. Third, public policy related to the social safety net has seen the most dramatic shift in almost

seventy-five years. In place of entitlements based on income and family composition, the Federal government and the states have created a set of policies that require work effort from those who would receive public assistance. These underlying challenges and interactions of public assistance and public policy affect the health and quality of life of families and individuals, particularly those who live in poverty.

We have a unique opportunity to learn about how rural community conditions and public policy affect the food, lifestyle, work and residence choices of rural versus urban households, and particularly how public policy can support low-income households in rural communities. Availability of four decades of panel data on household work and migration decisions allow new data sets - particularly the Local Employment Dynamics (LED) data available from the Department of Labor and U.S. Bureau of the Census - allow analysis of household decisions about work and place of residence that were unimaginable a decade ago. Statistical tools for econometric analysis - including tools for spatial analysis and analysis of panel data - have been developed and new statistical software makes these tools widely accessible.

This program specifically addresses improving quality of life, and healthier eating habits and lifestyles.

The outcomes of our studies have a tremendous impact on populations of great need, i.e., rural populations who face on-going challenges of health and well-being, families and individuals who live in poverty, Latino families in Oregon. The project activities will yield important knowledge about the factors that positively or negatively affect physical activity behavior, as well as, how much daily physical activity is critical in maintaining adequate energy balance/energy expenditure issues that affect obesity.

2. Scope of the Program

- In-State Extension
- In-State Research
- Multistate Research
- Multistate Extension
- Integrated Research and Extension
- Multistate Integrated Research and Extension

V(D). Planned Program (Assumptions and Goals)

1. Assumptions made for the Program

The key assumptions of this research project are that:

1. federal, state and local policymakers seek to understand how individual economic opportunity is affected by local economic and social context,
2. that such understanding will be useful in designing federal, state, and local policy to support state and local efforts to increase local community capacity
3. underlying challenges and interactions of public assistance and public policy affect quality of life of families and individuals who live in poverty, and
4. daily physical activity is critical in maintaining adequate energy balance/energy expenditure issues that affect obesity

2. Ultimate goal(s) of this Program

This program will produce important insights about rural and underrepresented populations who face on-going challenges of health, well-being, and economic opportunities. Research falls into two subareas:

1. Factors affecting the health and economic opportunities of rural people and the economic and social vitality of rural communities.
2. Strategies and policy affecting individual opportunities for rural and underrepresented people, and their economic and social conditions.

Program objectives

1. To demonstrate the benefits of human nutrition and interaction of healthy behavioral choices, including healthy diet and physical activity
 - To identify food compounds, dietary patterns, and educational strategies that promote healthy lifestyles and weights
 - To provide strategies to prevent obesity in high risk families to reduce the incidence of obesity in the U.S. and improve weight maintenance.
 - To identify strategies and activities to have children, youth, and families practice healthy eating and engage in healthy levels of physical activity (noi).
2. To examine perceptions of and barriers to physical activity in rural communities.
 - Identify individual attributes and family processes associated with specific patterns of physical activity among by youth within the context of a rural community.
 - Identify specific resources, opportunities, and barriers within the social and physical environment that either positively or negatively affect patterns of physical activity among small town youth.
 - Examine how individual attributes, family processes, and characteristics of place shape the capacity of rural youth to develop and maintain healthy patterns of physical activity.
3. To understand the links between quality of life for individual families and wider community and public policy influences.
 - To assess over time, how families have adapted to policy and economic changes to achieve self-sufficiency (household adaptive strategies and well-being that are associated with economic, food security, family functioning and policy).
 - To analyze policy areas connected to each quality of life domain, such as food security, access to mental and physical health resources, economic issues including transportation and childcare, and place-based policies for three specific sub-populations:Latino, non-Hispanic White, and Appalachian.
4. To understand how federal, state or local policy can affect individual opportunities for rural people, and economic and social conditions in rural places.
 - To understand how local economic and social context affects individual opportunity and household decisions, focusing on factors affecting why US households choose to live in a rural or an urban community.

V(E). Planned Program (Inputs)

1. Estimated Number of professional FTE/SYs to be budgeted for this Program

Year	Extension		Research	
	1862	1890	1862	1890
2013	0.1	0.0	1.0	0.0
2014	0.1	0.0	1.0	0.0
2015	0.1	0.0	1.0	0.0
2016	0.0	0.0	1.0	0.0
2017	0.0	0.0	0.0	0.0

V(F). Planned Program (Activity)

1. Activity for the Program

We will survey rural Oregon communities and carry out statistical analyses using primary and secondary data sources to better understand the barriers and opportunities in rural places for low-income and high-income workers, the migration patterns that flow from their work and location decisions, the implications of these changes for rural community vitality, and the effectiveness of public policies in strengthening the viability of rural places.

We will also a) determine factors that drive the decisions of educated rural householders to move to an urban locality through surveys, and b) examine factors to explain why low human capital people are attracted to rural places or otherwise reluctant (or unable) to leave them (thru surveys)

Further, we will develop an econometric model to study rural-urban migration and rural residential choice.

In summary:

- Conduct surveys
- Conduct data analyses
- Conduct mixed-methods longitudinal research (interviews,
- Conduct Research Experiments
- Develop models
- Develop Products, Curriculum, Resources.

- Provide Training.
- Assessments.
- Partnering.

2. Type(s) of methods to be used to reach direct and indirect contacts

Extension

Direct Methods	Indirect Methods
<ul style="list-style-type: none"> ● Workshop ● Group Discussion ● One-on-One Intervention ● Other 1 (professional journals) ● Other 2 (policy briefs) 	<ul style="list-style-type: none"> ● Web sites other than eXtension ● Other 1 (Newspaper articles)

3. Description of targeted audience

The primary target audiences for this research/extension effort are (1) federal, state, and local government officials and their staff members; (2) those working in the media who cover federal, state and local economic and social trends and conditions; (3) state and local community leaders who are involved in local public affairs; (4) social scientists who want to understand economic and social transformation of rural people and places.

- extension educators.
- commercial producers.
- youth aged 13-18.
- elderly residents
- rural residents
- Latino populations
- economists.
- policy makers.

V(G). Planned Program (Outputs)

NIFA no longer requires you to report target numbers for standard output measures in the Plan of Work. However, all institutions will report actual numbers for standard output measures in the Annual Report of Accomplishments and Results. The standard outputs for which you must continue to collect data are:

- Number of contacts
 - Direct Adult Contacts
 - Indirect Adult Contacts
 - Direct Youth Contacts
 - Indirect Youth Contact
 - Number of patents submitted
 - Number of peer reviewed publications
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(H). State Defined Outputs

1. Output Measure

- OTHER SCHOLARLY ACHIEVEMENTS: panel, awards, presentations

 - EFFECTS ON AND PROTECTION OF HUMAN HEALTH AND COMMUNITIES ...Rural health and communities models and data sets regarding
 - a) determinants of rural residential choice
 - b) processes that account for physical activity and the associated health outcomes among youth across ethnic and class boundaries in the context changing rural communities

 - EFFECTS ON AND PROTECTION OF HUMAN HEALTH ...Obesity intervention strategies or measures
 - *Identify strategies (message, pricing, foods) that will increase choosing healthful food choices among adolescents and young adults
 - *Identify key parent-child relationships that contribute to childhood overweight and resiliency in various populations.
 - *Identify opportunities for preventive interventions
 - *Identify objective, physiological-based measures for tailoring interventions for specific groups and subgroups.
 - *Develop new or improved intervention strategies targeted to childhood overweight in low income families.

 - EFFECTS ON AND PROTECTION OF HUMAN HEALTH...Avenues developed for better access to healthy foods
- Clicking this box affirms you will continue to collect data on these items and report the data in the Annual Report of Accomplishments and Results.

V(I). State Defined Outcome

O. No	Outcome Name
1	1 - Improved understanding about rural populations a) health, social, and economic opportunities in rural communities b) rural human capital in and outmigration
2	2 - Conceptual model will promote understanding of the processes that account for physical activity and the associated health outcomes among youth across ethnic and class boundaries in the context changing rural communities
3	A1 - Improved strategies in rural policies for - rural family and community welfare, local community vitality, poverty reduction - maximizing physical activity and physical and mental health of rural youth and adults
4	3 - Improved outreach, education, and professional practice in serving the needs of rural low-income families to improve the well-being and functioning of these families, including programmatic interventions that reduce the physical inactivity and promotes well-being of lower-income and ethnic minority youth across rural America
5	A2 - Improved governmental decisions about rural areas
6	Change...Improved well-being of lower-income and ethnic minority youth across rural America
7	4 - Understanding human health and nutritional behaviors *Understand the relationship between farm subsidy program and increasing obesity rates in the United States *Identify new or improved obesity intervention strategies in the community setting *Identify objective, physiological-based measures that correspond to target behaviors (bio-behavioral markers) for use later as measures of intervention progress and success or means for tailoring effective interventions *Identify key parent-child relationships that reflect resiliency and the interaction of these relationships with targeted nutritional behaviors *Understand various inputs and interactions of family and child, SES, nutrition, physiology and behavior *Identify strategies (message, pricing, foods) that will increase choosing healthful food choices among adolescents and young adults
8	A3 - Improved nutrition *More schools offer/encourage healthful foods *More effective programs and student experiences related to healthful foods *Markers and strategies become the standards of methods and measurement of childhood overweight and resiliency. *Policies consider health and financial implications of the farm subsidy program.
9	A4 - Families, children, and youth have access to healthy foods

Outcome # 1

1. Outcome Target

- 1 - Improved understanding about rural populations
 - a) health, social, and economic opportunities in rural communities
 - b) rural human capital in and outmigration

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 610 - Domestic Policy Analysis
- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

Outcome # 2

1. Outcome Target

2 - Conceptual model will promote understanding of the processes that account for physical activity and the associated health outcomes among youth across ethnic and class boundaries in the context changing rural communities

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 610 - Domestic Policy Analysis
- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

Outcome # 3

1. Outcome Target

- A1 - Improved strategies in rural policies for
 - rural family and community welfare, local community vitality, poverty reduction
 - maximizing physical activity and physical and mental health of rural youth and adults

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 610 - Domestic Policy Analysis
- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

Outcome # 4

1. Outcome Target

3 - Improved outreach, education, and professional practice in serving the needs of rural low-income families to improve the well-being and functioning of these families, including programmatic interventions that reduce the physical inactivity and promotes well-being of lower-income and ethnic minority youth across rural America

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 610 - Domestic Policy Analysis
- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

Outcome # 5

1. Outcome Target

A2 - Improved governmental decisions about rural areas

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 610 - Domestic Policy Analysis
- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

Outcome # 6

1. Outcome Target

Change...Improved well-being of lower-income and ethnic minority youth across rural America

2. Outcome Type : Change in Condition Outcome Measure

3. Associated Knowledge Area(s)

- 610 - Domestic Policy Analysis
- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

Outcome # 7

1. Outcome Target

4 - Understanding human health and nutritional behaviors

*Understand the relationship between farm subsidy program and increasing obesity rates in the United States

*Identify new or improved obesity intervention strategies in the community setting

*Identify objective, physiological-based measures that correspond to target behaviors (bio-behavioral markers) for use later as measures of intervention progress and success or means for tailoring effective interventions

*Identify key parent-child relationships that reflect resiliency and the interaction of these relationships with targeted nutritional behaviors

*Understand various inputs and interactions of family and child, SES, nutrition, physiology and behavior

*Identify strategies (message, pricing, foods) that will increase choosing healthful food choices among adolescents and young adults

2. Outcome Type : Change in Knowledge Outcome Measure

3. Associated Knowledge Area(s)

- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

Outcome # 8

1. Outcome Target

A3 - Improved nutrition

*More schools offer/encourage healthful foods

- *More effective programs and student experiences related to healthful foods
- *Markers and strategies become the standards of methods and measurement of childhood overweight and resiliency.
- *Policies consider health and financial implications of the farm subsidy program.

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 610 - Domestic Policy Analysis
- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

Outcome # 9

1. Outcome Target

A4 - Families, children, and youth have access to healthy foods

2. Outcome Type : Change in Action Outcome Measure

3. Associated Knowledge Area(s)

- 610 - Domestic Policy Analysis
- 802 - Human Development and Family Well-Being

4. Associated Institute Type(s)

- 1862 Research

V(J). Planned Program (External Factors)

1. External Factors which may affect Outcomes

- Natural Disasters (drought, weather extremes, etc.)
- Economy
- Appropriations changes
- Public Policy changes
- Government Regulations
- Competing Public priorities
- Competing Programmatic Challenges
- Populations changes (immigration, new cultural groupings, etc.)

Description

{NO DATA ENTERED}

V(K). Planned Program - Planned Evaluation Studies

Description of Planned Evaluation Studies

Evaluation studies include During, Before-After and After-Only evaluations, and in some instances, case studies and time series. The most prevalent data collection methodologies are the sampling, observation, on-site survey, structured and unstructured interviews .
