

2010 University of Maine Extension Annual Report of Accomplishments and Results

Status: Accepted

Date Accepted: 06/10/2011

I. Report Overview

1. Executive Summary

Extension Evolution

During 2010, we completed the final phase of a 2-year planning process resulting in a refocused plan of work. Driven by tightening budgets and new USDA/NIFA priorities, we have consolidated our resources into seven Planned Programs:

Programs based on NIFA Priorities:

Global Food Security and Hunger

Climate Change

Sustainable Energy

Childhood Obesity

Food Safety

Programs based on Additional Maine Priorities:

Sustainable Youth, Family and Community Development

Sustainable Community & Economic Development

Inherent in each priority issue is the opportunity to develop the leadership capacities of volunteers, business owners, or community groups focused on that priority issue; to address the interplay between human behavior and climate change; and the options and consequences of the choices we make with awareness of the implications for social, economic and environmental sustainability.

Our Digital Evolution: The past year marks an important division between our past and our future. While still believing in the value of human connection, we have put a strong emphasis on developing digital resources and educational programs in order to meet the measure of how people learn and interact in the world, now and in the future. We are creating new educational videos that address an ever-widening array of needs that are shared across the University of Maine website and embedded in online publications making it possible for anyone to learn how to grow, harvest, and/or preserve strawberries in Maine, ...or learn about food safety at farmer's markets, ... or understand how to look for BEDBUGS, ...and much, much more. Is it working? Google Analytics data suggests an enormous response, exponentially extending our ability to help people access research-based information and improve their lives.

Extension Success

Signs of the Seasons is a partnership between UMaine Extension, Maine Sea Grant and a group of advisors who have developed a complementary suite of indicators that will contribute to a more accurate profile of the fingerprint of climate change impacts in Maine, and help citizen monitors in our 4-H, Master Gardeners, and coastal volunteers understand how global climate change is affecting the plant and animal species they care about and depend upon. The project has formed a unique partnership among state, regional, and national entities, including practitioners of informal education, climate research, and communications to collect data on the seasonal cycles of plants and animals. Coastal and inland citizens engaged in environmental monitoring will contribute to an understanding of our changing climate first-hand and help people to adapt appropriately.

NIFA's National Water Program selected **Northeast Drinking Water and Human Health - Education, Testing, and Drinking Safe Water** as a 2010 Program of Excellence. According to National Program Leader Michael O'Neill the Region 1 collaboration made a significant contribution in dealing with the challenges of helping people learn to address the quality and safety of their own water.

UMaine Extension has been successful in promoting grant opportunities and fostering the submission of quality proposals to **Northeast Sustainable Agriculture, Research, and Education (SARE)** through grant-writing workshops, and one-on-one guidance to farmers, educators, and researchers, held. During 2009 and 2010, our Outreach Coordinator reached approximately 500 people with information about SARE mini-grant programs and provided direct individual guidance to 12 farmers and 3 agricultural professionals developing grant proposals. Maine leads the Northeast in the number of Farmer-Grower grants awarded relative to the number of farms in the state. Over the last 10 years:

- .. 51 Farmer-Grower grant projects have been funded for more than \$313, 600.
- .. 16 Research and Education grants have been funded for more than \$2,002,600
- .. 5 Professional Development grants have been funded for more than \$221,500 total
- .. 13 Partnership grants have been funded for more than \$104,600
- .. 8 Sustainable Community grants have been funded for more than \$102,900.

The Agricultural Economy: Our work with agriculture is fundamental - we are an important cog in the machinery that keeps agriculture strong in Maine. We add value through applied research, interacting directly with producers, and working with agricultural related businesses. Some examples:

UMaine Extension has fostered a fledgling artisan cheese making industry that is showing signs of success. For example, in 2005, one dairy farm turned to Extension to help them learn, plan, and develop a cheese making operation. In 2010 their production exceeded 500,000 pounds and their management credits Extension as being the change-agent that enabled this new value added product success.

The University of Maine Animal Health Laboratory (UMAHL) is the only site offering veterinary diagnostic services for poultry in Maine. The Lab offers necropsy and flock health services, as well as a certified salmonella laboratory capable of helping any farm to comply with FDA requirements. We also assist regional veterinarians in poultry and livestock cases. The lab has, in the last 20 years, been a vital member of Maine's salmonella risk reduction program, through which Maine's egg consumers have avoided egg-associated food-borne disease.

We offer a Farm Business Course aimed at helping existing local farmers, and those thinking about becoming farmers, transitioning farm ownership, or become better business managers, and hence, more profitable. Participants learned about selecting and evaluating a new farm enterprise, writing a business plan, enterprise budgets, record-keeping, and market research.

UMaine Extension works regionally to help transitioning organic dairy farms remain profitable and ecologically sound by shifting their farming systems to an integrated model that relies less on expensive concentrates purchased from far away and more on high quality local forage. With over 60 farms in Maine and 200 in Vermont having transitioned to organic dairy production in the last 10 years, the price for organic grain concentrates has skyrocketed. Our multistate project utilized University facilities and farmer participants to research and expand on-farm organic grain production. A database of yield potentials for organic winter and spring grains has been developed along with information on small grain silages harvested at various stages of maturity. This information has helped over 150 organic farmers reduce expenses, increase direct profits, and maintain value-added financial and environmental benefits of operating organically.

Decreasing Lobster Pound Mortality: One of the risks of lobster trading is holding stock to sell during winter months when prices are higher. Retailers hold lobsters in "pounds" until a suitable market price is reached. However, the economic advantage of impounding is greatly lessened due to mortality caused by stress and disease, reported as high as 20 percent or \$56 million statewide. UMaine Extension and the UMaine Animal Health Laboratory conducted a large study of stressors in lobster handling during

2009 and found that fast hauling speeds, depth of water, and rough handling produce a measurable stress in lobsters, leading to mortality losses. The study identified a microbial agent that appears to have a role in the shrinkage seen in the pounds, correction of which is projected to significantly reduce mortality and result in millions in additional revenue.

4-H @ UMaine Weekend: Connecting Kids to Campus is often the first opportunity for rural kids from Maine to experience a University. Each year we bring approximately 80 youth and adult volunteers from all parts of the state to learn about college living and studying at the University of Maine. During the weekend-long visit kids participate in discovery activities with a focus on science, engineering, and technology led by our diverse faculty and graduate students, participate in student life by staying in dorms, eating on campus, and even working out at the campus fitness center.

This year after attending 4-H @ UMaine weekend:

- .. 98 percent were thinking about going to college
- .. Two thirds are planning to study Science, Engineering or Technology as their chosen field
- .. 75 percent reported that 4-H @ UMaine weekend helped them with decision making about their future career/educational goals
- .. 81 percent were more confident that their social and academic life in college would be satisfying.

UMaine Extension is on the move. Times are tough, but the opportunities to make a difference for Maine people are many. We are proud to report that UMaine Extension's faculty and staff continues to perform excellent work. We are committed to working successfully with a broad range of partners to meet the needs of Maine people, and we understand that community-based collaboration is key to achieving measurable results. As we move into the future we are taking a long-range perspective by positioning ourselves for the next 20-30 years by:

- .. Revolutionizing our outreach through technology,
 - .. Adapting to economic and programmatic priorities in Maine and as expressed by USDA/NIFA,
- and
- .. Continuing to emphasize educational outreach that enables positive changes in the lives of those with whom we work.

We believe that the need for University outreach through a committed, enthusiastic, and energized Cooperative Extension program has never been greater.

2. Brief Explanation

The University of Maine Cooperative Extension is a member of the New England Planning and Reporting Consortium, a formalized partnership of Extension programs in Massachusetts, New Hampshire, Maine, and Vermont. As part of our multi-state collaboration, we have also developed a rotating multi-state Merit Review process to allow each state partner to receive a thorough peer-review of their state Plans of Work every four years. This rotational process is accomplished by faculty committees who review planned programs that relate to their own programming expertise.

As reported in our 2009 Annual Report of Accomplishments, late last year we completed a planning process that served as the foundation for our future Plans of Work. Informed by that process, our team and individual plans are currently in place and the formal multi-state & multi-institutional review process described above has been initiated. Results will be collated in the spring of 2011. Our future plans will be adjusted accordingly as a result of recommendations.

III. Stakeholder Input

1. Actions taken to seek stakeholder input that encouraged their participation

- Use of media to announce public meetings and listening sessions
- Targeted invitation to traditional stakeholder groups
- Targeted invitation to non-traditional stakeholder groups
- Targeted invitation to traditional stakeholder individuals
- Targeted invitation to non-traditional stakeholder individuals
- Targeted invitation to selected individuals from general public
- Survey of traditional stakeholder groups
- Survey of traditional stakeholder individuals
- Survey of the general public
- Survey specifically with non-traditional groups
- Survey specifically with non-traditional individuals
- Survey of selected individuals from the general public
- Other (Research using relevant current and first-source data)

Brief explanation.

A cross-section of stakeholders with diverse roles are currently engaged in reviewing our work in addressing our planned programs using consistent criteria. Reviewers are being asked to evaluate the justification for our work, quality and measurability of outcomes, evaluation intentions, and consistency with our mission. Reviewers are:

Global Food Security and Hunger

- .. Maine Potato Board - Don Flannery
- .. Maine Organic Farmers and Growers Association - Russell Libby
- .. Vermont Extension - Dr. Bob Parsons
- .. Maine Department of Agriculture, Food and Rural Resources - John Harker

- .. University of Southern Maine Department of Horticulture - Cheryl Rich

 - .. UMaine College of Education and Human Development - Dr. Mary Bird
 - .. UMaine Employee Assistance Program - Dr. Polly Moutevelis-Burgess
 - .. UMaine College of Education and Human Development - Dr. Gary Schilmoeller
 - .. National 4H Council - Dr. Suzanne Le Menestrel
 - .. University of Delaware Extension - Mark J. Manno
- Maine Priority Issues; Sustainable Community and Economic Development
 - .. Maine Community Foundation - Meredith Jones
 - .. Maine Rural Partners - Mary Ann Hayes
 - .. Maine Senate - Tom Saviello, Wilton, ME

Our ongoing process also includes interaction with partners who connect directly with citizens in focused ways and represent their interests accordingly. Selected examples include:

- .. Our partnership with citizen executive committees who provide direction and advice to each County Extension program in Maine and help to prioritize regional programming efforts.
- .. Quarterly interactions with the Maine Board of Agriculture as a representative of agricultural commodity groups, organizations, state government, and related industries.
- .. The Wild Blueberry Commission of Maine who represents the industry growers and processors, and who administers a state tax fund of approximately \$1 million.
- .. The Maine Potato Board, composed principally of Maine-based potato farmers who offer input and advice backed up with support for research through their education and research committees.
- .. The Pine Tree State 4-H Foundation who works as a close partner to enrich youth experiences through our 4-H Youth Development Program.
- .. A variety of advisory boards and councils who are formed with targeted intent to guide the work of some of our important programs. Examples include the Senior Companion Advisory Board, the Maine Sea Grant Policy Advisory Committee, Tanglewood 4-H Camp and Learning Center Board. and the Maine Board of Pesticides Control.

Brief explanation.

An example: According to Feeding America, hunger is a reality for 1 out of every 8 Americans. Demand for supplemental food from food banks is growing - with an increased demand of 30 percent over the past 12 months. Unfortunately, this increased demand is occurring when donations to food banks are declining. This is primarily due to grocery stores becoming better at forecasting demand thus minimizing overstocks. In addition, with rising food prices, the money available to food banks doesn't have the purchasing power of a year ago. Under this new economic reality, providing food to those in need will require creative ways to solve an old problem. Over the years we have learned that growing the produce is the easy part; distributing it effectively and efficiently to those in need in our rural area is challenging. UMaine Extension has mobilized its volunteers to grow, glean, and distribute over 70 tons of fresh produce annually for Maine residents who do not have enough.

Brief Explanation of what you learned from your Stakeholders

Through our partnership with the UMaine College of Natural Sciences, Forestry, and Agriculture and the Maine Agricultural and Forest Experiment Station, we represent the Maine Agricultural Center, which supports stakeholder-driven agricultural research and education for Maine. Examples of recent projects include:

- .. Prototheca Bovine Mastitis
- .. Mycorrhizal Fungi Colonization of Leeks
- .. Red and Specialty Potato Evaluation
- .. Vacuum Silage
- .. The Effect of Scape Removal on Garlic Yield
- .. Grass Finished and Natural Beef

Issue (Who cares and Why)

Harvest for Hunger: Hunger is a community issue and as such requires action from the entire community to affect change.

What has been done

UMaine Extension?s Harvest for the Hungry Program involves home gardeners, Master

Gardeners, and other volunteers who grow and glean fresh fruits and vegetables and donate them to needy individuals and families in Maine.

Results

During the 2010 garden season, UMaine Extension collected 191,977 pounds of fresh fruit and vegetables to give to food banks, soup kitchens, service organizations, and directly to families as part of our healthy lifestyles educational programs. At an average market value of \$1.69 per pound, the contribution was valued at more than \$325,400. The program's objectives are to mitigate hunger, improve nutrition and health, and help the recipients develop lifelong positive nutritional habits.

Minimizing Pesticide Use on Wild Maine Blueberries: Maine's 60,000 acres of wild blueberries are worth over \$250 million annually to growers, and more to the Maine economy. The blueberry maggot destroys commercial blueberry crops by attacking the fruit and leaving the berry non-viable. Tighter controls enacted by the EPA, and strict residue restrictions in many countries made growers concerned about insecticide residues on the fruit and the potential for limiting the salability of their crop.

What has been done

UMaine Extension and the UMaine Department of Plant and Soil Science have partnered with Maine growers to conduct on-farm trials to test the efficacy of new less toxic insecticides, and developed monitoring protocols that help growers know when treatments are necessary, and when they are not.

Results

Our trials have confirmed this new class of pesticides is effective against the blueberry maggot, and growers in Maine are using the monitoring protocols developed as a component of this project. As a result, insecticide is being used less frequently and only when necessary, helping to minimize residue and maintain the value of wild Maine blueberries to local, out-of-state, and international markets.

The Maine Compost School: It is predicted that most landfills in the U.S. will be full within the next decade. Each year Americans dispose of millions of tons garbage that, when mixed together in landfills does not bio-degrade and causes a variety of problems. Composting provides a way not only of reducing the amount of waste that needs to be disposed of, but also of converting it into a valuable product that is useful for farming, gardening, and landscaping.

What has been done

The Maine Compost School helps people understand how to recycle organic material, reduce their contributions to landfills, and produce rich, valuable, soil enhancing compost, a marketable commodity. Participants come from throughout world and are professional compost operators, farmers, municipal workers, homeowners, teachers, and students who gain certification in week long or 2-day programs. The School is a partnership between UMaine Extension, the Maine Department of Agriculture Food and Rural Resources, Maine Department of Environmental Protection, and the Maine State Planning Office.

Results

In the last two years, six new compost businesses were started in Maine as a direct result of the Maine Compost School, creating 17 new jobs and a variety of seasonal employment opportunities. One existing compost producer increased sales 200 percent after the first year of attending the class, with gross annual income for their compost operation now over \$50,000. The Portland Maine school district has reduced waste removal cost by approximately \$15,000 after implementing more recycling efforts in the school cafeterias since attending a school compost workshop in 2009. Since 2006 160 people received certification of technical ability from the Maine Compost School.

Locally-grown Organic Bread Wheat: Maine millers and bakers cannot find enough locally grown organic wheat that meets quality standards for bread production demand. Supplying this expanding market represents a significant economic opportunity for our region's farmers, who lack to produce high quality grains for bread end-use markets using organic methods.

What has been done

UMaine Extension and the Maine Agricultural and Forest Experiment Station are leading a multi-state project to increase farmers' ability to produce high quality organic bread wheat with a group of 10 researchers from Maine and Vermont through a 4-year \$1.3 million grant from the USDA Organic Agriculture Research and Extension Initiative. In partnership with local farmers, millers, and bakers, we are conducting research on varieties, fertility, weed management, and rotations; and developing tools for farmers to ensure success.

Results

Deputy Secretary of Agriculture, Kathleen Merrigan, recognized our grant at a media event in Maine in October 2009. She praised the project's involvement of stakeholders, integration of research and Extension, and efforts to revitalize a local food system. The USDA blog post about the event stated, "If there is a better example of USDA's 'Know Your Farmer, Know Your Food' initiative in action, we'd like to see it."

The project was initiated with a trip to Quebec for Maine and Vermont farmers, millers, bakers, and researchers to build connections with their more experienced Quebecois colleagues. A Vermont producer used information he gleaned from the trip to construct a mill design appropriate for his small scale operation. The bread wheat variety trials have so far identified 6-8 new varieties that show promise for our region. As a result, several farmers planted one new winter variety based on the yield and quality data that was made available to them in late August. A fertility study evaluating nitrogen topdress treatments to increase grain protein has inspired one farmer to test these strategies on his own farm through a SARE partnership grant.

Humble Beginnings for Community Farmer's Market: Southern Aroostook County in northern Maine has historically lacked a Farmers' Market that would provide local small, diverse vegetable and livestock farms a direct market to consumers and give residents access to local farm-fresh foods.

What has been done

In 2009, UMaine Extension approached community leaders in Houlton and led a committee that would create the Houlton, Maine Farmers' Market.

Results

Through humble beginnings of having only four vendors at the end of the 2009 growing season, 2010 saw a venue change, increased advertising, and increased participation for both buyers and sellers. At the end of the 2010 season, the newly named Houlton Community Market boasted 24 vendors providing locally produced food and crafts that generated approximately \$100,000 in direct sales to local producers, and more to downtown businesses who benefit from proximity to consumers who are patronizing the market.

Maintaining a Valuable Asset; Sand Beaches: Sand beaches are a major contributor to the economies of Southern Maine coastal communities. Chronic erosion can damage property values and the economic potential of this valuable asset. Understanding changes due to erosion and making appropriate management decisions is a result of long term data collection and analysis.

What has been done

The Southern Maine Beach Profile Monitoring Program has been operating under the leadership of Maine Sea Grant and UMaine Extension since 1999. Our program coordinates community volunteers to engage in controlled monitoring of beach profiles in order to provide data on changes that may result in damage to beaches.

Results

Our 11 year dataset is routinely used as a basis for management decisions in order to maintain adjacent property values and the value of beaches to communities. As an example, our profiling data contributed to a recent decision to reconstruct a seawall at Higgins Beach in Scarborough Maine that helps sustain property values responsible for generating more than \$2.3 million in property taxes from adjacent properties. As a key indicator of the value seven communities (York, Ogunquit, Wells, Kennebunk, Saco, Scarborough, South Portland) all maintain support for the Program to help ensure long-term value of this important community asset.

Maine's Climate Future: In 2009 the 124th Maine Legislature passed a resolve to create a stakeholder-based group to evaluate climate change adaptation options for Maine.

What has been done

As requested by the state's Governor, Maine Sea Grant and UMaine Extension collaborated with the University of Maine Climate Change Institute and other partners to edit and produce Maine's Climate Future's: An Initial Assessment. This document served as the foundation for the statewide stakeholder process for climate preparation through a resolve from the legislature to work towards gathering data, information and recommendations for all sectors across Maine. This included the commitment of 67 stakeholder participants meeting consistently during a one-year timeframe for which we contributed community-based education expertise for both the Steering Committee and the Marine Committee.

Results

This resulted in a consensus and summary documents provided to the legislature who in turn created a resolve to continue the work toward the development of a complete Climate Change Adaptation Plan for Maine, work that was initiated in the following legislative session.

Growing Alternative Fuel: Aroostook County, Maine is a vast agricultural region where many farms have been abandoned in recent decades because of high operating costs. They have gone from producing 150,000 acres of potatoes in the 1950's to 50,000 today. Grass pellets have the potential to establish a new bio-energy industry in Maine, create a valuable crop for Maine farmers, and reduce energy costs for state residents.

What has been done

For the past two years we have been researching the use of perennial grasses left from small grain rotations as solid fuel crops. We are now working with the UMaine Process Development Center on a Biomass Engineered Fuel Project, a \$1.65 million initiative recently funded by the State of Maine Technology Asset Fund linking UMaine research and development with Maine farmers, energy consumers, companies, and entrepreneurs to develop and commercialize biomass fuel. In the next four years, the project will focus on the manufacturing efficiencies of converting energy crops to solid biofuel, and testing that biofuel for performance, combustion efficiency, and ultimate commercial potential.

Results

The goal is to prototype a commercial-scale demonstration facility in Aroostook County ? the first of its kind in the Northeast. Grass pellets will be beta tested in commercial biomass systems in the state. Several Maine companies have expressed interest in operating biofuel production facilities and licensing the technology.

UMaine researchers say the annual economic impact of a single commercial pellet mill in northern Maine is expected to be between \$17 million and \$23 million. With potential for 25 pellet mills statewide, the overall economic impact is projected to be more than \$500 million annually,

possibly replacing more than 100 million gallons of home heating oil each year.

Nutrition and Physical Activity: In Maine, more than 28 percent of children age 10-17 are overweight or obese, and children in limited-income families are twice as likely to be overweight or obese as their middle income peers. Maine is one of ten states with the highest rate of food insecure children under the age of 18. This contradiction between the rate of obesity and food insecurity demonstrates that poor food choice and lack of nutritious food have a significant impact on Maine's children.

What has been done

UMaine Extension's Eat Well Nutrition Education Program provides limited-income citizens, including youth, with and basic nutrition, physical activity, and food resource management education. We worked with over 15,000 young people this year through school enrichment programs and summer youth programming; and 2,225 families in one of three ways: one-on-one in their homes; by presenting lessons in small group settings; through Eat Well by Mail, our correspondence course which can be customized to address specific individual needs.

Results

As a result of our nutrition and physical activity education programs during 2010:

More than 13,000 youth increased their knowledge of the essentials of human nutrition, increased their ability to select low-cost, nutritious foods, and now eat a variety of foods.

Fifty-two percent of the 972 families (over 2,400 individuals) who graduated from our program, demonstrated improvement in meal planning, comparing prices, using grocery lists, and not running out of food.

One of our nutrition aides offers: "I asked one of my clients in Portland if my visits had helped him. He beamed and said that he was saving \$15.00 every two weeks at the grocery store. He's

quit buying processed foods. His cholesterol is lower; his blood sugar is in control. He said that I encouraged him to walk more often and he attributes that to his weight loss and the fact that he's maintaining his new weight.?

Issue (Who cares and Why)

Enabling New Enterprises Selling Meat and Poultry Products: In the US any company that processes and sells meat or meat containing products is required by the USDA to have a Hazard Analysis Critical Control Point (HACCP) plan. This requirement was put in place to help ensure that high health risk foods like meat were properly and safely processed. The state of Maine has been without formal meat and poultry HACCP certification training since 2003. Since then producers have had to attend a course in Connecticut or Pennsylvania to become certified.

What has been done

During 2010 two multi-day HACCP courses were offered through UMaine Extension and the Maine Department of Agriculture, Food and Rural Resources. Part lecture and part hands-on activity, the courses enabled participants to write and implement a HACCP plan for their meat and/or poultry selling operations.

Results

As a result, 43 individuals representing 38 Maine-based companies were HACCP certified for meat and poultry. The 2010 trainings enabled the start of 16 new small companies producing cuts of beef and pork, and products such as jerky, meat topped pizza, and smoked or barbecued meats; and helped six non-meat related food business learn more about food safety and apply HACCP principle to their businesses.

Master Food Preservers ? Preserving the Harvest: UMaine Extension has always been a very important resource for providing current research-based information about preserving food at home. Recently interest and demand for food preservation education has sky-rocketed due in part to tough economics and the public interest to support a local food system.

What has been done

Our Master Food Preserver Program was launched in 2008 to help meet this emerging need. Approximately 12 new volunteers are taught each year to extend our reach through food preservation master classes. Each receives 40 hours of extensive training in food safety and storage, and the specifics of canning, freezing, drying, making jams and jellies, pickling, and storing foods. After training, volunteers pass a minimum competency test to assess their knowledge of food preservation and storage methods, and their ability to teach using the resource materials.

Results

This year, Master Food Preserver volunteers delivered Preserving the Harvest workshops to more than 350 attendees. Evaluations completed by all participants indicate that:
?95 percent understand how to preserve foods in accordance with the latest USDA guidelines;
?95 percent feel more confident about their skills in home food preservation.
?88 percent plan to preserve foods differently (safely) to reduce their risk of food borne illness;
Based on these results, we can begin to understand the impact of our work on creating a social shift towards a more educated and skilled public that can improve their health, contribute to a revitalizations of our local food system, and positively impact the local agricultural economy through an increase in safely preserving local foods at home to eat year round.

Effective Non-profit Community Organizations: Well functioning non-profit community-based organizations address problems and create new opportunities to improve their communities. Each has potential to increase opportunities through effective program planning, improved decision-making, and improved financial sustainability. While organizations can build that capacity through internal expertise, others need help.

What has been done

This year we worked with seventeen non-profit and community organizations in mid-coast Maine who participated in working sessions in which they reflected on their current capacities, articulated shared visions, and devised work-plans and budgets to support agreed upon strategies to take them forward. The organizations ranged from those concerned with the arts, land conservation, food security, community health, housing and education.

Results

Participants reported feeling more confident that they understood their roles and that they had the tools to follow through on their plans. They have also reported it was vitally important to have an experienced and neutral facilitator to guide their work, creating a space for dialogue about and resolution of key organizational concerns and opportunities.

Strategies for Economic and Community Success: While the profitability of business is a key factor in a strong local economy, local town government often plays a role in economic development. Often there are strong but competing views about what a town should do to support local business and economic development. Town leaders need assistance to negotiate inclusive and productive planning and input processes that maximize the potential for success.

What has been done

UMaine Extension works with community governments to plan, facilitate, and evaluate planning sessions that require stakeholder and community member input.

Results

Examples of success include:

?We worked with two neighboring coastal communities to identify community assets and concerns and summarize results at two community forums. Based on the results we led discussions to formation of an endowed community fund managed on behalf of the communities to fund local organizations in support of community vitality. A follow-up community forum focused on the role the arts could play to stimulate the local economy.

?In one island community select-board members listened to citizens and local business owners

Speak about factors under town control that contributed to and detracted from business success. This helped town officials understand how to revise their comprehensive plans and zoning ordinances to remove barriers to business development.
?In another we helped the town council and town manager create a four-part strategic plan for stimulating the local economy and making local government services more effective and responsive to residents and businesses.

4-H Youth Development in Maine: Research has shown that it is important for youth to be involved with positive development experiences both during the school day and during out of school time. Not only does positive development provide youth with multiple chances to develop leadership and important life skills, it also helps to strengthen families and communities. Research also shows that youth who are participate in positive development opportunities are more likely to be involved in their communities and less likely to get into trouble or make choices that could negatively impact their lives.

What has been done

For more than 90 years the Maine 4-H program has provided positive youth development experiences for kids. Maine youth who are involved in 4-H community clubs, 4-H afterschool, 4-H school enrichment, and 4-H camps benefit from a direct connection with the resources of the University of Maine which helps to further their learning and career explorations.

Results

In 2010 more than 31,500 youth participated in the Maine 4-H program. Their participation included attending 4-H camps, 4-H community clubs, and 4-H afterschool and 4-H school enrichment programs. There were more than 14,500 who participated in hands on experiential learning related to science, engineering and technology, engaging in numerous projects such as robotics, animal science, plant science, and environmental science. More than 3,600 youth engaged in citizenship projects and were actively involved in making a positive difference in their

local communities. Examples included growing food for a local food pantry, helping to establish a community garden, supporting the families of deployed soldiers, and developing safer trails for recreational vehicles such as ATVs (all terrain vehicles). There were also 19,000 youth engaged in 4-H projects that focused on healthy lifestyles who learned about food and nutrition including how to grow their own food, and how to stay active to improve their health and minimize the risk of childhood obesity.

Foundations of the Future; Parenting the next Generation: Society depends on parents to care for and educate the next generation. But from pre-birth to preschool, young children have complex and constantly changing needs, and what they learn during this stage lays the foundation for their future. When parents do not understand children's normal behavior, they cannot give their children the skills they will need as adults to contribute meaningfully and productively to society.

What has been done

Using the Parents as Teachers Born to Learn? curriculum and the Brazelton Touchpoints Approach?, and in cooperation with the other Maine Families home visiting programs, UMaine Parent Educators provided parenting information, support, and encouragement to over 3,000

families last year.

Results

Parent Educators answered families' questions about child development, health, literacy, nutrition, safety, and other topics. They helped parents become good observers of their children, pointed out their strengths, and promoted their sense of competence as their children's first and most important teachers. According to Parents as Teachers' research, parents who participate in a Born to Learn? program show increased parenting knowledge, attitudes, and behaviors. As a local reflection of this research, 93 percent of the parents who responded to the program survey reported that participation has caused a great or moderate increase in their confidence in their parenting skills. A full 100 percent would recommend this program to other first-time parents, which demonstrates the consensus that parents' sense of support and confidence, so essential to the successful achievement of their important task, is meaningfully promoted by the work of our parent education program.

The Father's Role in Parenting Education: The first five years of a child's life are a critical time for development. Recent research has concluded that fathers play an important role in their child's development in these early years. Positive outcomes from involved fathers include educational, emotional, and social success. Unfortunately, the vast majority of programs that serve families with young children are often aimed almost exclusively at mothers.

What has been done

Through the Maine Families Program of the UMaine Extension, parent education professionals have made efforts to include first-time fathers in our parenting programs. New fathers are encouraged to participate in enrollment visits, goal setting, home safety assessments, and developmental screenings. Hands-on parent-child interactions are a vital part of each home visit and parenting session providing fathers opportunities to be actively involved.

Results

This year 331 first-time families were served in four Maine Counties. Our educators reported that 287 of those families had fathers in the home or involved in parenting. More than half of those fathers participated in home visits and 39 percent were fully involved in the parenting education experience. Through home visits these fathers were able to take an active role in parenting, receive information about child development, learn ways to interact positively with their child, and gain knowledge about the importance of their role in their child's development.

4-H Delivers Food Security to Maine Families: In our current distressed economy, many Maine families are struggling to put food on the table, and with tight budgets are unable to afford nutritious fresh produce. Lack of fresh produce contributes to poor health.

What has been done

The Coastal Clovers 4-H Club wanted to learn gardening skills and help their struggling neighbors so created Food for Families, a project to grow and donate fresh produce to local food pantries. Their goal was to donate at least a ton. Club members received generous support, including a grant from Cumberland Farms National 4-H Council Youth in Action Grant. They constructed a makeshift greenhouse, started seedlings, and grew lots of nutritious food. The entire harvest was donated to local and statewide food pantries.

Results

Club members learned valuable life skills in agriculture, self-sufficiency, team-work, planning, and goal setting. This summer, through their hard work and over 1,000 hours of community service they harvested 6,600 pounds of fresh produce and fruit that was delivered to a local food pantry and a statewide Food Bank distribution network. The estimated value of their contribution was over \$18,000. Throughout the summer and early fall struggling Maine families were able to enjoy nutritious meals including fresh cabbage, zucchini, squash, cauliflower, peppers, broccoli, cucumbers, tomatoes, green beans, watermelon and cantaloupe ? all carefully sown, tended, and harvested by young hands.

Federal/University Partnership Benefits Seniors and the Economy of Maine: Maine is, per capita, the oldest state in the country, making caring for our aging population a pressing issue. State reduction of MaineCare (Medicare) costs are realized by keeping frail elderly at home as they desire rather than being placed in long-term care.

What has been done

Many Maine seniors are willing and able to be viable contributors to their community. The Senior Companion Program offers an opportunity for volunteers with limited incomes to provide companionship and non-medical support to others who are homebound and/or isolated, helping to keep them independent and at home. The Program is supported with funding from the Corporation for National and Community Service, and the University of Maine.

Results

The Senior Companion Program provides opportunity for all participants to be as independent as possible given their life situation. A recent study through the University of Maine Economics Department showed that the Senior Companion Program was saving a minimum of \$4.6 million per year by helping home bound elderly remain in their home rather than going into long-term care.

O. No.	OUTCOME NAME
1	Adopt appropriate nutrient management strategies
2	Adopt practices that maintain long-term productivity
3	Adopt practices that maintain profitability
4	Improve animal well-being
5	Maintain nutrient management certification
6	Make better decisions using available diagnostics
7	Participate in Maine cattle health assurance program
8	Participate in farm animal identification program
9	Participate in livestock disease monitoring programs
10	Participate in livestock quality assurance program
11	Participate in relevant animal associations
12	Participate in the Maine grass farmer network
13	Use grasslands efficiently for feed and water quality protection
14	Evaluate and adopt nutrient sources, recycling and delivery systems that produce high quality crops
